00328 Low Power Octal ECL/TTL Bi-Directional Translator with Latch

🗙 National Semiconductor

100328 Low Power Octal ECL/TTL Bi-Directional Translator with Latch

General Description

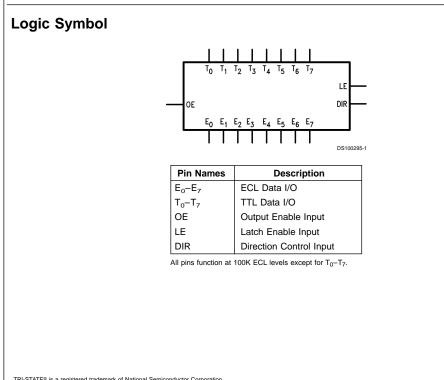

The 100328 is an octal latched bi-directional translator designed to convert TTL logic levels to 100K ECL logic levels and vice versa. The direction of this translation is determined by the DIR input. A LOW on the output enable input (OE) holds the ECL outputs in a cut-off state and the TTL outputs at a high impedance level. A HIGH on the latch enable input (LE) latches the data at both inputs even though only one output is enabled at the time. A LOW on LE makes the 100328 transparent.

The cut-off state is designed to be more negative than a normal ECL LOW level. This allows the output emitter-followers to turn off when the termination supply is -2.0V, presenting a high impedance to the data bus. This high impedance reduces termination power and prevents loss of low state noise margin when several loads share the bus.

The 100328 is designed with FAST® TTL output buffers, featuring optimal DC drive and capable of quickly charging and discharging highly capacitive loads. All inputs have 50 k Ω pull-down resistors.

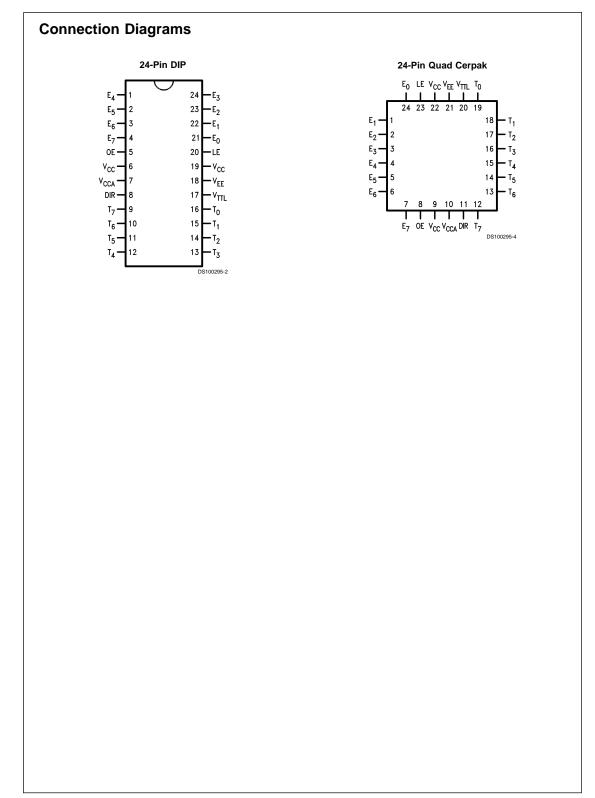

Features

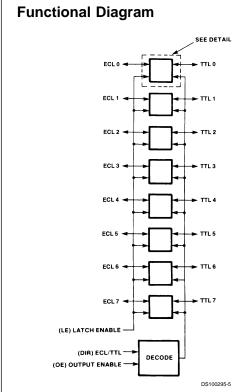

- Identical performance to the 100128 at 50% of the supply current
- Bi-directional translation
- 2000V ESD protection
- Latched outputs
- FAST TTL outputs
- TRI-STATE[®] outputs
- Voltage compensated operating range = -4.2V to -5.7V
- Available to MIL-STD-883

TRI-STATE® is a registered trademark of National Semiconductor Corporation. FAST® is a registered trademark of Fairchild Semiconductor.

Truth Table

OE	DIR	LE	ECL	TTL	Notes
			Port	Port	
L	Х	L	LOW	Z	
			(Cut-Off)		
L	L	н	Input	Z	(Notes 1, 3)
L	Н	н	LOW	Input	(Notes 2, 3)
			(Cut-Off)		
Н	L	L	L	L	(Notes 1, 4)
Н	L	L	Н	н	(Notes 1, 4)
Н	L	Н	Х	Latched	(Notes 1, 3)
Н	Н	L	L	L	(Notes 2, 4)
Н	Н	L	Н	Н	(Notes 2, 4)
Н	Н	н	Latched	Х	(Notes 2, 4)

H = HIGH Voltage Level L = LOW Voltage Level X = Don't Care

Z = High Impedance

Note 1: ECL input to TTL output mode.

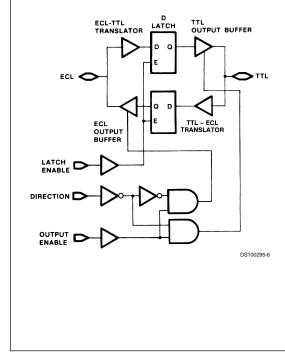

Note 2: TTL input to ECL output mode.

Note 3: Retains data present before LE set HIGH.

Note 4: Latch is transparent.

Detail

Absolute Maximum Ratings (Note 5)

.

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/ Distributors for availability and specifications.

Storage Temperature (T _{STG})	-65°C to +150°C
Maximum Junction Temperature (T _J)	
Ceramic	+175°C
V _{EE} Pin Potential to	
Ground Pin	-7.0V to +0.5V
V _{TTL} Pin Potential to	
Ground Pin	-0.5V to +6.0V
ECL Input Voltage (DC)	V _{EE} to +0.5V
ECL Output Current	
(DC Output HIGH)	–50 mA
TTL Input Voltage (Note 7)	-0.5V to +6.0V
TTL Input Current (Note 7)	-30 mA to +5.0 mA

Voltage Applied to Output in HIGH State					
TRI-STATE Output	-0.5V to +5.5V				
Current Applied to TTL					
Output in LOW State (Max)	Twice the Rated I _{OL} (mA)				
ESD (Note 6)	≥2000V				

Recommended Operating Conditions

Case Temperature (T _C)					
Military	–55°C to +125°C				
ECL Supply Voltage (V _{EE})	-5.7V to -4.2V				
TTL Supply Voltage (V _{TTL})	+4.5V to +5.5V				
Note 5: Absolute maximum ratings are those values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.					
Note 6: ESD testing conforms to MIL-STD-883, Method 3015.					
Note 7: Either voltage limit or current limit is sufficient to protect inputs.					

Military Version TTL-to-ECL DC Electrical Characteristics

 $V_{FF} = -4.2V$ to -5.7V, $V_{CC} = V_{CCA} = GND$, $T_{C} = -55^{\circ}C$ to +125°C, $V_{TTI} = +4.5V$ to +5.5V

			70	mA		TTL Output in TRI-STATE	

Note 8: F100K 300 Series cold temperature testing is performed by temperature soaking (to guarantee junction temperature equals -55°C), then testing immediately without allowing for the junction temperature to stabilize due to heat dissipation after power-up. This provides "cold start" specs which can be considered a worst case condition at cold temperatures.

Note 9: Screen tested 100% on each device at -55°C, +25°C, and +125°C, Subgroups, 1, 2 3, 7, and 8.

Note 10: Sample tested (Method 5005, Table I) on each manufactured lot at -55°C, +25°C, and +125°C, Subgroups A1, 2, 3, 7, and 8.

Note 11: Guaranteed by applying specified input condition and testing $V_{OH}\!/\!V_{OL}$.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DE-VICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMI-CONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

National does not assume any responsibility for use of any circuity described, no circuit patent licenses are implied and National reserves the right at any time without notice to change said circuitry and specifications.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
