## 54AC/74AC899 • 54ACT/74ACT899

## 9-Bit Latchable Transceiver

 with Parity Generator/Checker
## General Description

The 'AC/'ACT899 is a 9-bit to 9-bit parity transceiver with transparent latches. The device can operate as a feedthrough transceiver or it can generate/check parity from the 8 -bit data busses in either direction. The 'AC/'ACT899 features independent latch enables for the A-to-B direction and the B-to-A direction, a select pin for ODD/EVEN parity, and separate error signal output pins for checking parity.

## Features

- Latchable transceiver with output sink of 24 mA
- Option to select generate parity and check or "feedthrough" data/parity in directions A-to-B or B-to-A
- Independent latch enable for A-to-B and B-to-A directions
- Select pin for ODD/EVEN parity
- ERRA and ERRB output pins for parity checking
- Ability to simultaneously generate and check parity
- May be used in system applications in place of the '534 and '280
- May be used in system applications in place of the '657 and '373 (no need to change $T / \overline{\mathrm{R}}$ to check parity)
- 4 kV minimum ESD immunity

Ordering Code: See Section 8

## Functional Description

The 'AC/'ACT899 has three principal modes of operation which are outlined below. These modes apply to both the A-to-B and B-to-A directions.

- Bus $A(B)$ communicates to Bus $B(A)$, parity is generated and passed on to the $B$ (A) Bus as BPAR (APAR). If LEB (LEA) is HIGH and the Mode Select (SEL) is LOW, the parity generated from $B[0: 7](A[0: 7])$ can be checked and monitored by ERRB (ERRA).
- Bus $A(B)$ communicates to Bus $B(A)$ in a feed-through mode if SEL is HIGH. Parity is still generated and checked as ERRA and ERRB in the feed-through mode (can be used as an interrupt to signal a data/parity bit error to the CPU).
- Independent Latch Enables (LEA and LEB) allow other permutations of generating/checking (see Function Table below).

Note 1: Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. National does not recommend operation of FACTTM circuits outside databook specifications.
