## 3-channel BTL driver for CD Players BA6199FP

The BA6199FP, an IC for CD players, has an internal 3-channel H-bridge BTL power driver, 5 V regulator (attached PNP transistor required), standard operational amplifier, and reset output

- Applications
$C D$ players, CD-ROM drives and other optical disc devices
- Features

1) HSOP 2B-pin package allows for miniaturization of applications.
2) Internal thermal shutdown circuit.
Wide dynamic range
3) Gain is adjustable with an attached resistor.
4) Internal 5V regulator. (attached PNP transistor re quired)
5) Internal standard operational amplifier
-Absolute maximum ratings $\left(\mathrm{Ta}=25^{\circ} \mathrm{C}\right)$

| Parameter | Symbol | Limıts | Unit |
| :--- | :---: | :---: | :---: |
| Power supply voltage | Vcc | 18 | V |
| Power dissipation | Pd | $1700^{* 1}$ | mW |
| Operating temperature range | Topr | $-30 \sim 85$ | ${ }^{\circ} \mathrm{C}$ |
| Storage temperature range | Tstg | $-50 \sim 150$ | ${ }^{\circ} \mathrm{C}$ |
| Rated current | lomax. | $1.4^{* 2}$ | A |

* 1 When mounted to a $50 \times 50 \times 1.0 \mathrm{~mm}$ paper phenel board

Reduced by 13.6 mW for each increase In Ta of $1^{\circ} \mathrm{C}$ over $25^{\circ} \mathrm{C}$
*2 Within the range of power dissipation and safe operational area (ASO)
-Recommended operating conditions ( $\mathrm{Ta}=25^{\circ} \mathrm{C}$ )

| Parameter | Symbol | Min. | Typ. | Max. | Unlt |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Power supply voltage | Vec | 6 | - | 11 | V |
|  |  | 4.8 | - | 11 | $\mathrm{~V}^{* 3}$ |

*3 Withoul regulator

| Pin No. | Pin name | Function |
| :---: | :---: | :---: |
| 1 | VIN1 | Channel 1 input |
| 2 | VIN1 ${ }^{\prime}$ | Changing channel 1 gain |
| 3 | VIN2 | Channel 2 input |
| 4 | VIN2' | Changing channel 2 gain |
| 5 | OPOUT | Operational amplifier output |
| 6 | OPIN- | Operational amplifier negative input |
| 7 | OPIN+ | Operational amplifier positive input |
| 8 | GND | Substrate ground |
| 9 | Vcc | Vcc |
| 10 | BIAS | Bias input |
| 11 | VO2- | Channel 2 negative output |
| 12 | $\mathrm{VO2+}$ | Channel 2 positive output |
| 13 | VO1- | Channel 1 negative output |
| 14 | VO1+ | Channel 1 positive output |
| 15 | vo3+ | Channel 3 positive output |
| 16 | VO3- | Channel 3 negative output |
| 17 | N.C |  |
| 18 | N.C |  |
| 19 | MUTE | Mute control |
| 20 | Vcc | Vcc |
| 21 | GND | Substrate ground |
| 22 | RGND | Regulator ground |
| 23 | REGB | Connect to base of attached transistor |
| 24 | REGOUT | 5 V output (Note 4) |
| 25 | RESET | Reset output |
| 26 | TEST | Test pin |
| 27 | VIN3' | Changing Channel 3 gain |
| 28 | VIN3 | Channel 3 input |
| Notes: 1. "Driver positive output" and "driver negative output" indicate polarity relative to input. <br> 2. The radiating fin is internally shorted by pin 8 (GND). <br> 3. Pin 22 is the ground pin for the regular and internal voltage source and so musi be connected to a ground even it the regulator is not used. <br> 4. Arach a PNP transistor collector. |  |  |

-Operation notes

1. Relationship between reset output and muting

|  | Muting | Reset output |
| :--- | :---: | :---: |
| Supply voltage drop | OFF | ' H ' $\rightarrow$ ' L ' |
| Bias drop | ON | ' H ' $\rightarrow$ ' L ' |
| Thermal shutdow | ON | ' H ' $\rightarrow$ ' L ' |
| Muting | ON | No change |

Reset output changes to LOW when the supply voltage drops below 5.0 V (typically) and changes to HIGH when the supply voltage rises above 5.3 V (typically).
Bias drop
When the bias pin (pin 23) voltage drops below 1.4 V , the circuit is muted and reset output changes to LOW.
Thermal shutdown
If the chip redues a temperature of $1765^{\circ} \mathrm{C}$ (Typ.) or more, the circuit is muted and the reset output changes to LOW.
Muting
When the mute pin (pin 7) voltage is opened or lowered below 0.5 V , the circuit is muted, but reset output does not change.
2. All three driver output chaninels are muted during thermal shutdown, muting and a drop in bias pin voltage. No other components are muted.
3. Deadzone

Dead zone width is determined as follows:
Dead zone width=input resistance $\times 1 \mu \mathrm{~A}$
When using the internal resistor ( $10 \mathrm{k} \Omega$ ), dead zone width is 10 mV (typically one side). Because the input resistance and $1 \mu \mathrm{~A}$ temperature characteristics are canceled out, there is virtually no variation due to temperature as long as the internal input resistor is used. However, when connecting an attached resistor in series in order to change the gain, dead zone width varies according to temperature and is determined as follows:
Dead zone width $=$ (internal input resistance + at tached resistance) $\times 1 \mu \mathrm{~A}$
4. Be sure to connect the IC to a $0.1 \mu \mathrm{~F}$ bypass capacitor to the power supply, at the base of the IC.
5. The capacitor between regulator output ( 24 pin ) and GND also serves to prevent oscillation of the IC, so select one with good temperature characteristics.
6. Pin 26 is the test pin and should be left open during normal operation.
7. Pins 17 and 18 are NC pins and are not connected internally.

## Notes

- The contents described in this catalogue are correct as of March 1997.
- No unauthorized transmission or reproduction of this book, either in whole or in part, is permitted.
- The contents of this book are subject to change without notice. Always verify before use that the contents are the latest specifications. If, by any chance, a defect should arise in the equipment as a result of use without verification of the specifications, ROHM CO., LTD., can bear no responsibility whatsoever.
- Application circuit diagrams and circuit constants contained in this data book are shown as examples of standard use and operation. When designing for mass production, please pay careful attention to peripheral conditions.
- Any and all data, including, but not limited to application.circuit diagrams, information, and various data, described in this catalogue are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO., LTD., disclaims any warranty that any use of such device shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes absolutely no liability in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices; other than for the buyer's right to use such devices itself, resell or otherwise dispose of the same; no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by ROHM CO., LTD., is granted to any such buyer.
- The products in this manual are manufactured with silicon as the main material.
- The products in this manual are not of radiation resistant design.

The products listed in this catalogue are designed to be used with ordinary electronic equipment or devices (such as audio-visual equipment, office-automation equipment, communications devices, electrical appliances, and electronic toys). Should you intend to use these prod ucts with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers, or other safety devices) please be sure to consult with our sales representatives in advance.

- Notes when exporting
- It is essential to obtain export permission when exporting any of the above products when it falls under the category of strategic material (or labor) as determined by foreign exchange or foreign trade control laws.
- Please be sure to consult with our sales representatives to ascertain whether any product is classified as a strategic material.
