

**CMOS POSITIVE VOLTAGE REGULATORS  
 VERY LOW DROP OUT - VERY LOW QUIESCENT**

- LOW CURRENT CONSUMPTION (TYP. 19 $\mu$ A)
- WIDE OPERATING VOLTAGE RANGE
- VERY LOW DROP OUT VOLTAGE  
 $(V_i - V_o < 0.2 \text{ V}, I_o = 40 \text{ mA})$
- CMOS TECHNOLOGY

SO-8

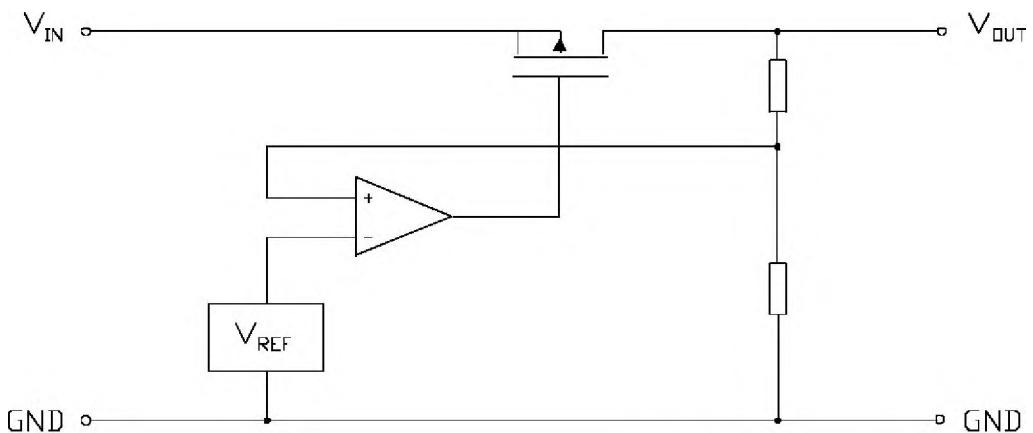

TO-92

**DESCRIPTION**

The C78L00 series is a CMOS Positive Voltage Regulators. These regulators contains internal precision voltage reference, error amplifier, control transistor and output voltage setting resistor.

The regulation voltage is fixed by internal circuits and the following lines of different output voltages are available.

This series is suitable for battery operated items and battery back-up systems because of low current consumption and low drop out voltage.

## C78L00 SERIES

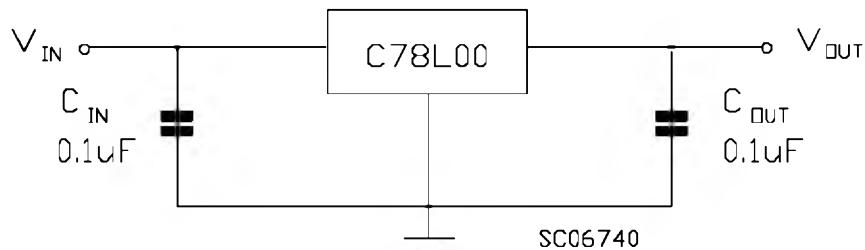

---

### ABSOLUTE MAXIMUM RATING

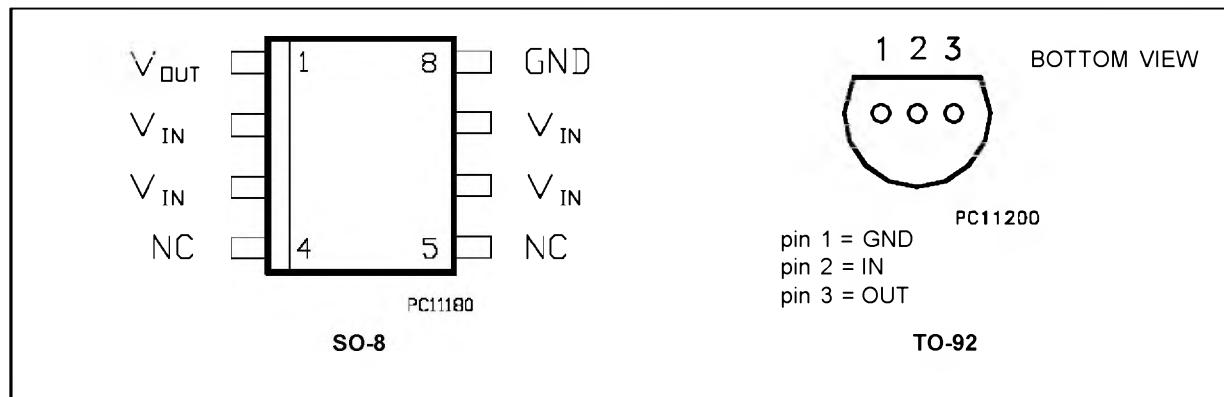

Symbol	Parameter	Value	Unit
$V_i$	DC Input Voltage	14	V
$V_o$	Maximum Output Voltage	5.5	V
$I_o$	Output Current	100	mA
$P_{tot}$	Power Dissipation	Internally limited (*)	
$T_{stg}$	Storage Temperature Range	- 40 to 150	°C
$T_{op}$	Operating Junction Temperature Range For C78L00B For C78L00C	- 40 to 150 0 to 125	°C °C
$T_{sold}$	Soldering Temperature	260	°C
$t_{sold}$	Soldering Time	10	sec

(\*) Our SO-8 package used for Voltage Regulators is modified internally to have pins 2, 3, 6 and 7 electrically commoned to the die attach flag. This particular frame decreases the total thermal resistance of the package and increases its ability to dissipate power when an appropriate area of copper on the printed circuit board is available for the heatsinking. The external dimensions are the same as for the standard SO-8.
