## High Power Dual Path Simultaneous DP3T Switch with Control Logic

## CXM3544XR

## Description

The CXM3544XR can be used in wireless communication systems, for example, dual-band/triple-band and antenna diversity CDMA handsets. This CXM3544XR has an integrated decoder 4 CMOS control inputs. The Sony JPHEMT process is used for low insertion loss and low distortion characteristic. (Applications: Antenna Switch for Cellular Handsets, Dual-band/Triple-band and Antenna Diversity)

## Features

- Low insertion loss: 0.30 dB (Typ.) @900MHz, 0.4dB (Typ.) @2GHz
- High linearity: IIP3 = 65dBm (Min.)
- Low voltage operation: VDD $=2.5 \mathrm{~V}$
- No DC blocking capacitors
- 4 CMOS compatible control line
- Lead-Free and RoHS compliant

## Package

Small package XQFN 22pin ( $2.4 \mathrm{~mm} \times 3.3 \mathrm{~mm} \times 0.35 \mathrm{~mm}$ ) (Typ.)

## Structure

GaAs JPHEMT MMIC, CMOS Logic

## Absolute Maximum Ratings

- Bias voltage
- Control voltage
- Operating temperature
- Storage temperature

Electrical characteristics are measured with all RF ports terminated in $50 \Omega$.
Measured with the recommended circuit.
*1 Control state on truth table. (State 1-6: Single path mode, State 7-12: Simultaneous mode)

## Recommended Circuit

Note) 1. No DC blocking capacitors are required on all RF ports.
2. The DC levels of all RF ports are GND.
3. L1 $(27 \mathrm{nH})$ and C1 (12pF) are recommended on antenna port for ESD protection.
4. Cbypass ( 100 pF ) is recommended on VDD for DC line filtering.
