# National Semiconductor

# DP8308 8-Bit TRI-STATE® Bidirectional Transceiver (Non-Inverting)

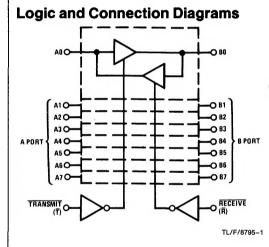

# **General Description**

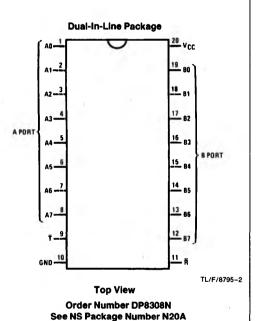

The DP8308 is a high speed Schottky 8-bit TRI-STATE bidirectional transceiver designed to provide bidirectional drive for bus oriented microprocessor and digital communications systems. It is capable of sinking 16 mA on the A ports and 48 mA on the B ports (bus ports). PNP inputs for low input current and an increased output high (V<sub>OH</sub>) level allow compatibility with MOS, CMOS, and other technologies that have a higher threshold and less drive capabilities. In addition, it features glitch-free power up/down on the B port up or down.

DP8308 is featured with Transmit (T) and Receive (R) control inputs.

#### **Features**

- 8-bit bidirectional data flow reduces system package count
- Bidirectional TRI-STATE inputs/outputs interface with bus oriented systems
- PNP inputs reduce input loading
- Output high voltage interfaces with TTL, MOS, and CMOS
- 48 mA/300 pF bus drive capability
- Pinouts simplify system interconnections
- Independent T and R controls for versatility
- Compact 20-pin dual-in-line package
- Bus port glitch free power up/down

## Logic Table

Control Inputs		<b>Resulting Conditions</b>			
Transmit	Receive	A Port	B Port		
1	0	OUT	IN		
0	1	IN	OUT		
1	1	TRI-STATE	TRI-STATE		
0	0	Both /	Active*		

\*This is not an intended logic condition and may cause oscillations.

# Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Output Voltage	5.5V
Storage Temperature	-65°C to +150°C
Maximum Power Dissipation* at 25°C	
Cavity Package	1667 mW
Molded Package	1832 mW
Lead Temperature (soldering, 4 sec.)	260°C
*Derate cavity package 11.1 mW/°C above 25°C	; derate molded package

# 14.7 mW/°C above 25°C.

### DC Electrical Characteristics (Notes 2 and 3)

#### AC Electrical Characteristics (Continued)

**DP8308** 

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified, min/max limits apply across the supply and temperature range listed in the table of Recommended Operating Conditions. All typical values given are for V<sub>CC</sub> = 5V and T<sub>A</sub> = 25°C.

Note 3: All currents into device pins are positive; all currents out of device pins are negative. All voltages are referenced to ground unless otherwise specified. Note 4: Only one output at a time should be shorted.
