

# MILITARY HIGH-REL PRODUCTS

Processed to MIL-STD-883, Method 5004, Class B

# 1K x 8-Bit Static RAM MKB4118A(P/J/E)-82/83/84

#### **FEATURES**

- Tested per MIL-STD-883B method 5004 and qualified per method 5005.
- ☐ Static operation, single +5 V power supply
- □ Military temperature range ( $-55^{\circ}C \le T_{\Delta} \le +125^{\circ}C$ )
- ☐ Organization: 1K x 8 bit RAM JEDEC pinout
- □ Pin compatible with Mostek's BYTEWYDE™ memory family
- □ 24/28 pin ROM/PROM compatible pin configuration

## **DESCRIPTION**

The MKB4118A uses Mostek's advanced circuit design techniques to package 8,192 bits of static RAM on a single chip. Static operation is achieved with high performance and lower power dissipation by utilizing Address Activated<sup>TM</sup> circuit design techniques.

CE	ŌĒ	WE	Mode	DQ
V <sub>IH</sub>	×	х	Deselect	High Z
V <sub>IL</sub>	х	V <sub>IL</sub>	Write	D <sub>IN</sub>
V <sub>IL</sub>	V <sub>IL</sub>	V <sub>IH</sub>	Read	D <sub>OUT</sub>
V <sub>IL</sub>	V <sub>IH</sub>	V <sub>IH</sub>	Read	High Z
X = Don't	Care	-		

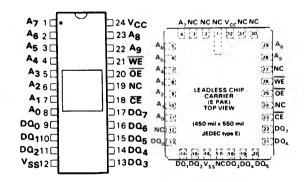

Part No.	Access Time	R/W cycle Time
MKB4118A-82	150 nsec	150 nsec
MKB4118A-83	200 nsec	200 nsec
MKB4118A-84	250 nsec	250 nsec

- □ CE and OE functions facilitate bus control
- □ Industrial MK (Sign available (-40°C/85°C)

The M 8A excels in high speed memory applications where organization requires relatively shallow depth wide word format. The MKB4118A presents to the high density cost effective N-MOS memory with the lance characteristics necessary for today's microessor applications.

#### PIN CONNECTIONS

Figure 2

PIN NAMES								
Ao - Ao	Address Inputs	WE	Write Enable					
CE	Chip Enable	ŌĒ	Output Enable					
V <sub>ss</sub>	Ground	NC	No Connection					
V <sub>cc</sub>	Power (+5 V)	DQ <sub>0</sub> - DQ <sub>7</sub>	Data In/Data Out					

128 . 16 . 1

#### **ABSOLUTE MAXIMUM RATINGS\***

Voltage on any pin relative to V <sub>SS</sub>	5 V to +7.0 V
Operating Temperature T <sub>A</sub> (Ambient)	55°C to +125°C
Storage Temperature (Ambient)	
Power Dissipation	1 Watt
Output Current	20 mA

<sup>\*</sup>Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated inthe operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

## **RECOMMENDED DC OPERATING CONDITIONS7**

 $(-55^{\circ}C \le T_{A} \le +125^{\circ}C)$

#### NOTES:

- 1. All voltages referenced to VSS
- 2. Measured with .4  $\leq$  V<sub>I</sub> 5.0 V, outputs deselected and V<sub>CC</sub> = 5 V.
- AC test conditions: input rise and fall times ≤ 5 ns; input levels 0 V to 3 V; timing measurement reference level 1.5 V.
- 4. Measured with a load as shown in Figure 3
- 5. Effective capacitance calculated from the equation C =  $\frac{\Delta \Omega}{\Delta V}$  with  $\Delta V$  = 3 volts and power supplies at nominal levels.
- 6. Output buffer is deselected.
- 7. A minimum of 2 ms time delay is required after application of  $V_{CC}$  (+5 V) before proper device operation can be achieved.
- 8. I<sub>CC1</sub> measured with outputs open.
- Negative undershoots to a minimum of -1.5 V are allowed with maximum of 50 ns pulse width. DC value of low level must not exceed -0.3 V.
- 10. Power consumption decreases with temperature from a maximum at low temperature to a minimum at high temperature.

TIMING DIAGRAM Figure 5

#### **DESCRIPTION (Cont.)**

The MKB4118A features a fast  $\overline{\text{CE}}$  (50% of Address Access) function to permit memory expansion without impacting system access time. A fast  $\overline{\text{OE}}$  (50% of access time) is included to permit data interleaving for enhanced system performance.

The MKB4118A is pin compatible with Mostek's BYTEWYDE™ memory family of RAMs, ROMs and EPROMs.

#### **OPERATION**

#### Read Mode

The MKB4118A is in the read mode whenever the Write Enable Control input (WE) is in the high state.

In the read mode of operation, the MKB4118A provides a fast address ripple-through access of data from 8 of 8192 locations in the static storage array. Thus, the unique address specified by the 10 Address Inputs (An) define which 1 of 1024 bytes of data is to be accessed.

A transition on any of the 10 address inputs will disable the 8 data output drivers after  $t_{AZ}$ . Valid Data will be available to the 8 data output drivers within  $t_{AA}$  after the last address input signal is stable, providing that the  $\overline{CE}$  and  $\overline{OE}$  access times are satisfied. If  $\overline{CE}$  or  $\overline{OE}$  access times are not met, data access will be measured from the limiting parameter ( $t_{CEA}$  or  $t_{OEA}$ ) rather than the address. The state of the 8 data t/O signals is controlled by the Chip Enable  $\overline{(CE)}$  and Output Enable  $\overline{(OE)}$  control signals.

# Write Mode

The MKB4118A is in the write mode whenever the Write Enable (WE) and Chip Enable (CE) control inputs are in the low state.

The write cycle is initiated by the  $\overline{WE}$  pulse going low provided that  $\overline{CE}$  is also low. The leading edge of the  $\overline{WE}$  pulse is used to latch the status of the address bus.

NOTE: In a write cycle the latter occurring edge of either  $\overline{WE}$  or  $\overline{CE}$  will determine the start of the write cycle. Therefore,  $t_{AS}$ ,  $t_{WD}$  and  $t_{AH}$  are referenced to the latter occurring edge of  $\overline{CE}$  or  $\overline{WE}$ . Addresses are latched at this time. All write cycles whether initiated by  $\overline{CE}$  or  $\overline{WE}$  must be terminated by the rising edge of  $\overline{WE}$ . If the output bus has been enabled ( $\overline{CE}$  and  $\overline{OE}$  low) then  $\overline{WE}$  will cause the output to go to the high Z state in  $t_{WEZ}$ .

Data In must be valid  $t_{DSW}$  prior to the low to high transition of  $\overline{WE}$ . The Data In lines must remain stable for  $t_{DHW}$  after  $\overline{WE}$  goes inactive. The write control of the MKB4118A disables the data out buffers during the write cycle; however,  $\overline{OE}$  should be used to disable the data out buffers to prevent bus contention between the input data and data that would be output upon completion of the write cycle.
