MPC7410 Part Number Specification for the MPC7410RXnnnPD Series

Motorola Part Numbers Affected:

XPC7410RX450PD XPC7410RX500PD XPC7410RX533PD This document describes part-number-specific changes to recommended operating conditions and revised electrical specifications, as applicable, from those described in the general *MPC7410 Hardware Specifications* (order #: MPC7410EC/D).

Specifications provided in this document supersede those in the *MPC7410 Hardware Specifications*, for the part numbers listed in Table A only. Specifications not addressed herein are unchanged. Because this document is frequently updated, refer to http://www.motorola.com/semiconductors or to your Motorola sales office for the latest version.

Note that headings and table numbers in this document are not consecutively numbered. They are intended to correspond to the heading or table affected in the general hardware specification. Part numbers addressed in this document are listed in Table A. For more detailed ordering information, see Table 17.

Table A. Part Numbers Addressed by this Data Sheet

Motorola Part	Operat	ing Condition	s			
Number	CPU Frequency	Vdd ∣T₁(°C) کا		Significant Differences from Hardware Specification		
XPC7410RX450PD	450 MHz	2.0V±50mV	0 to 65	Modified Voltage & Temperature Specification to achieve 450Mhz frequency		
XPC7410RX500PD	500 MHz	2.0V±50mV	0 to 65	Modified Voltage & Temperature Specification to achieve 500Mhz frequency		
XPC7410RX533PD	533 MHz	2.0V±50mV	0 to 65	Modified Voltage & Temperature Specification to achieve 533Mhz frequency		

Note:

The X prefix in a Motorola PowerPC part number designates a "Pilot Production Prototype" as defined by Motorola SOP 3-13. These are from a limited production volume of prototypes manufactured, tested and Q.A. inspected on a qualified technology to simulate normal production. These parts have only preliminary reliability and characterization data. Before pilot production prototypes may be shipped, written authorization from the customer must be on file in the applicable sales office acknowledging the qualification status and the fact that product changes may still occur while shipping pilot production prototypes.

Sleep Mode		•	•	•	•
Maximum	2.13	2.25	2.33	W	1, 2
Sleep Mode—PLL and D	LL Disabled				
Typical	0.5	0.5	0.5	W	1, 3
Maximum	2.0	2.0	2.0	W	1, 2

Notes:

- 1. These values apply for all valid processor bus and L2 bus ratios. The values do not include I/O Supply Power (OVdd and L2OVdd) or PLL/DLL supply power (AVdd and L2AVdd). OVdd and L2OVdd power is system dependent, but is typically <10% of Vdd power. Worst case power consumption for AVdd = 15 mw and L2AVdd = 15 mW.</p>
- 2. Maximum power is measured at 65 °C and Vdd = 2.0V while running an entirely cache-resident, contrived sequence of instructions which keep the execution units, including AltiVec, maximally busy.
- 3. Typical power is an average value measured at 65 °C and Vdd = 2.0V in a system while running typical benchmarks.
