

4-BIT SINGLE-CHIP MICROCONTROLLERS

The μ PD753208 is one of the 75XL Series 4-bit single-chip microcontrollers and has a data processing capability comparable to that of an 8-bit microcontroller.

The μ PD753208 has an on-chip LCD controller/driver and is based on the μ PD75308B of the 75X Series. However, the μ PD75308B is supplied in an 80-pin package, whereas the μ PD753208 is supplied in a 48-pin package (375 mils, 0.65-mm pitch) and therefore is suitable for small-scale application systems. In addition, the μ PD753208 features expanded CPU functions and performs high-speed operations at a low voltage of 1.8 V.

Detailed information about functions can be found in the following user's manual. Be sure to read it before designing. μ PD753208 User's Manual: U10158E

Features

- Low-voltage operation: $V_{DD} = 1.8$ to 5.5 V
 - Can be driven by two 1.5-V batteries
- Internal memory
 - Program memory (ROM):
 - 4096 \times 8 bits (μ PD753204)
 - 6144 \times 8 bits (μ PD753206)
 - 8192 \times 8 bits (μ PD753208)
 - Data memory (RAM):
 - 512 \times 4 bits
- Variable instruction execution time for high-speed operation and power saving operation
 - 0.95, 1.91, 3.81, 15.3 μ s (@ 4.19-MHz operation)
 - 0.67, 1.33, 2.67, 10.7 μ s (@ 6.0-MHz operation)
- Internal programmable LCD controller/driver
- Small package:
 - 48-pin plastic shrink SOP (375 mils, 0.65-mm pitch)
- One-time PROM version: μ PD75P3216

Applications

Remote controllers, Cameras, Sphygmometers, Compact-disc radio cassette player compo systems, gas meters, etc.

Ordering Information

Part number	Package	ROM (\times 8 bits)
μ PD753204GT-xxx	48-pin plastic shrink SOP (375 mils, 0.65-mm pitch)	4096
μ PD753206GT-xxx	48-pin plastic shrink SOP (375 mils, 0.65-mm pitch)	6144
μ PD753208GT-xxx	48-pin plastic shrink SOP (375 mils, 0.65-mm pitch)	8192

Remark xxx indicates ROM code suffix.

Unless otherwise specified, references in this data sheet to the μ PD753208 mean the μ PD753204 and the μ PD753206.

The information in this document is subject to change without notice.

Function Outline

Parameter		Function	
Instruction execution time		<ul style="list-style-type: none"> • 0.95, 1.91, 3.81, 15.3 μs (@ 4.19-MHz operation with system clock) • 0.67, 1.33, 2.67, 10.7 μs (@ 6.0-MHz operation with system clock) 	
Internal memory	ROM	4096 × 8 bits (μPD753204)	
		6144 × 8 bits (μPD753206)	
		8192 × 8 bits (μPD753208)

Note The ROM capacity depends on the product.

3. PIN FUNCTION

3.1 Port Pins (1/2)

Pin Name	Input/Output	Alternate Function	Function	8-bit I/O	After Reset	I/O Circuit TYPE <small>Note 1</small>
P00	Input	INT4	4-bit input port (PORT0). For P01 to P03, on-chip pull-up resistors can be specified by software in 3-bit units.	No	Input	(B)
P01	Input/Output	\overline{SCK}				(F)-A
P02	Input/Output	SO/SB0				(F)-B
P03	Input/Output	SI/SB1				(M)-C
P10	Input	INT0	Input port in 1 bit unit (PORT1). On-chip pull-up resistors can be specified by software in 2-bit units. Noise elimination circuit can be specified with P10/INT0.	No	Input	(B)-C
P13		TI0				
P20	Input/Output	PTO0	4-bit input/output port (PORT2). On-chip pull-up resistors can be specified by software in 4-bit units.	No	Input	E-B
P21		PTO1				
P22		PCL/PTO2				
P23		BUZ				
P30	Input/Output	LCDCL	Programmable 4-bit input/output port (PORT3). This port can be specified input/output bit-wise. On-chip pull-up resistor can be specified by software in 4-bit units.	No	Input	E-B
P31		SYNC				
P32		–				
P33		–				
P50 to P53 <small>Note 2</small>	Input/Output	–	N-ch open-drain 4-bit input/output port (PORT5). A pull-up resistor can be contained bit-wise (mask option). Withstand voltage is 13 V in open-drain mode.	No	High level (when pull-up resistors are provided) or high-impedance	M-D

- Notes**
1. Characters in parentheses indicate the Schmitt-trigger input.
 2. If on-chip pull-up resistors are not specified by mask option (when used as N-ch open-drain input port), low level input leakage current increases when input or bit manipulation instruction is executed.

3.1 Port Pins (2/2)

Pin Name	Input/Output	Alternate Function	Function	8-bit I/O	After Reset	I/O Circuit TYPE ^{Note 1}
P60	Input/Output	KR0	Programmable 4-bit input/output port (PORT6). This port can be specified for input/output bit-wise. On-chip pull-up resistors can be specified by software in 4-bit units.	No	Input	(F)-A
P61		KR1				
P62		KR2				
P63		KR3				
P80	Input/Output	S23	4-bit input/output port (PORT8). On-chip pull-up resistors can be specified by software in 4-bit units. ^{Note 2}	Yes	Input	H
P81		S22				
P82		S21				
P83		S20				
P90	Input/Output	S19	4-bit input/output port (PORT9). On-chip pull-up resistors can be specified by software in 4-bit units. ^{Note 2}		Input	H
P91		S18				
P92		S17				
P93		S16				

- Notes**
1. Characters in parentheses indicate the Schmitt-trigger input.
 2. Do not connect on-chip pull-up resistors specified by software when using as segment signal output pins.

3.2 Non-Port Pins (1/2)

Pin Name	Input/Output	Alternate Function	Function	After Reset	I/O Circuit TYPE ^{Note 1}
TI0	Input	P13	Inputs external event pulses to the timer/event counter.	Input	(B)-C
PTO0	Output	P20	Timer/event counter output	Input	E-B
PTO1		P21	Timer counter output		
PTO2		P22/PCL			
PCL		P22/PTO2	Clock output		
BUZ		P23	Optional frequency output (for buzzer output or system clock trimming)		
SCK	Input/Output	P01	Serial clock input/output	Input	(F)-A
SO/SB0		P02	Serial data output Serial data bus input/output		(F)-B
SI/SB1		P03	Serial data input Serial data bus input/output		(M)-C
INT4	Input	P00	Edge detection vectored interrupt input (both rising edge and falling edge detection)	Input	(B)
INT0	Input	P10	Edge detection vectored interrupt input (detection edge can be selected). Noise elimination circuit can be specified.	Input	(B)-C
KR0 to KR3	Input/Output	P60 to P63	Falling edge detection testable input	Input	(F)-A
S12 to S15	Output	–	Segment signal output	Note 2	G-A
S16 to S19	Output	P93 to P90	Segment signal output	Input	H
S20 to S23	Output	P83 to P80	Segment signal output	Input	H
COM0 to COM3	Output	–	Common signal output	Note 2	G-B
V _{LC0} to V _{LC2}	–	–	LCD drive power On-chip split resistor is enable (mask option).	–	–
BIAS	Output	–	Output for external split resistor disconnect	Note 3	–
LCDCL ^{Note 4}	Input/Output	P30	Clock output for externally expanded driver	Input	E-B
SYNC ^{Note 4}	Input/Output	P31	Clock output for externally expanded driver sync	Input	E-B

- Notes**
1. Characters in parentheses indicate the Schmitt trigger input.
 2. Each display output selects the following VLCX as input source.
S12 to S15: V_{LC1}, COM0 to COM2: V_{LC2}, COM3: V_{LC0}.
 3. When a split resistor is contained Low level
When no split resistor is containedHigh-impedance
 4. These pins are provided for future system expansion.
At present, these pins are used only as pins P30 and P31.

3.2 Non-Port Pins (2/2)

Pin Name	Input/Output	Alternate Function	Function	After Reset	I/O Circuit TYPE <small>Note 1</small>
X1	Input	–	Crystal/ceramic connection pin for the system clock oscillator. When inputting the external clock, input the external clock to pin X1, and the reverse phase of the external clock to pin X2.	–	–
X2	–	–			
RESET	Input	–	System reset input (low-level active)	–	(B)
IC	–	–	Internally connected. Connect directly to V _{DD} .	–	–
V _{DD}	–	–	Positive power supply	–	–
V _{SS}	–	–	Ground potential	–	–

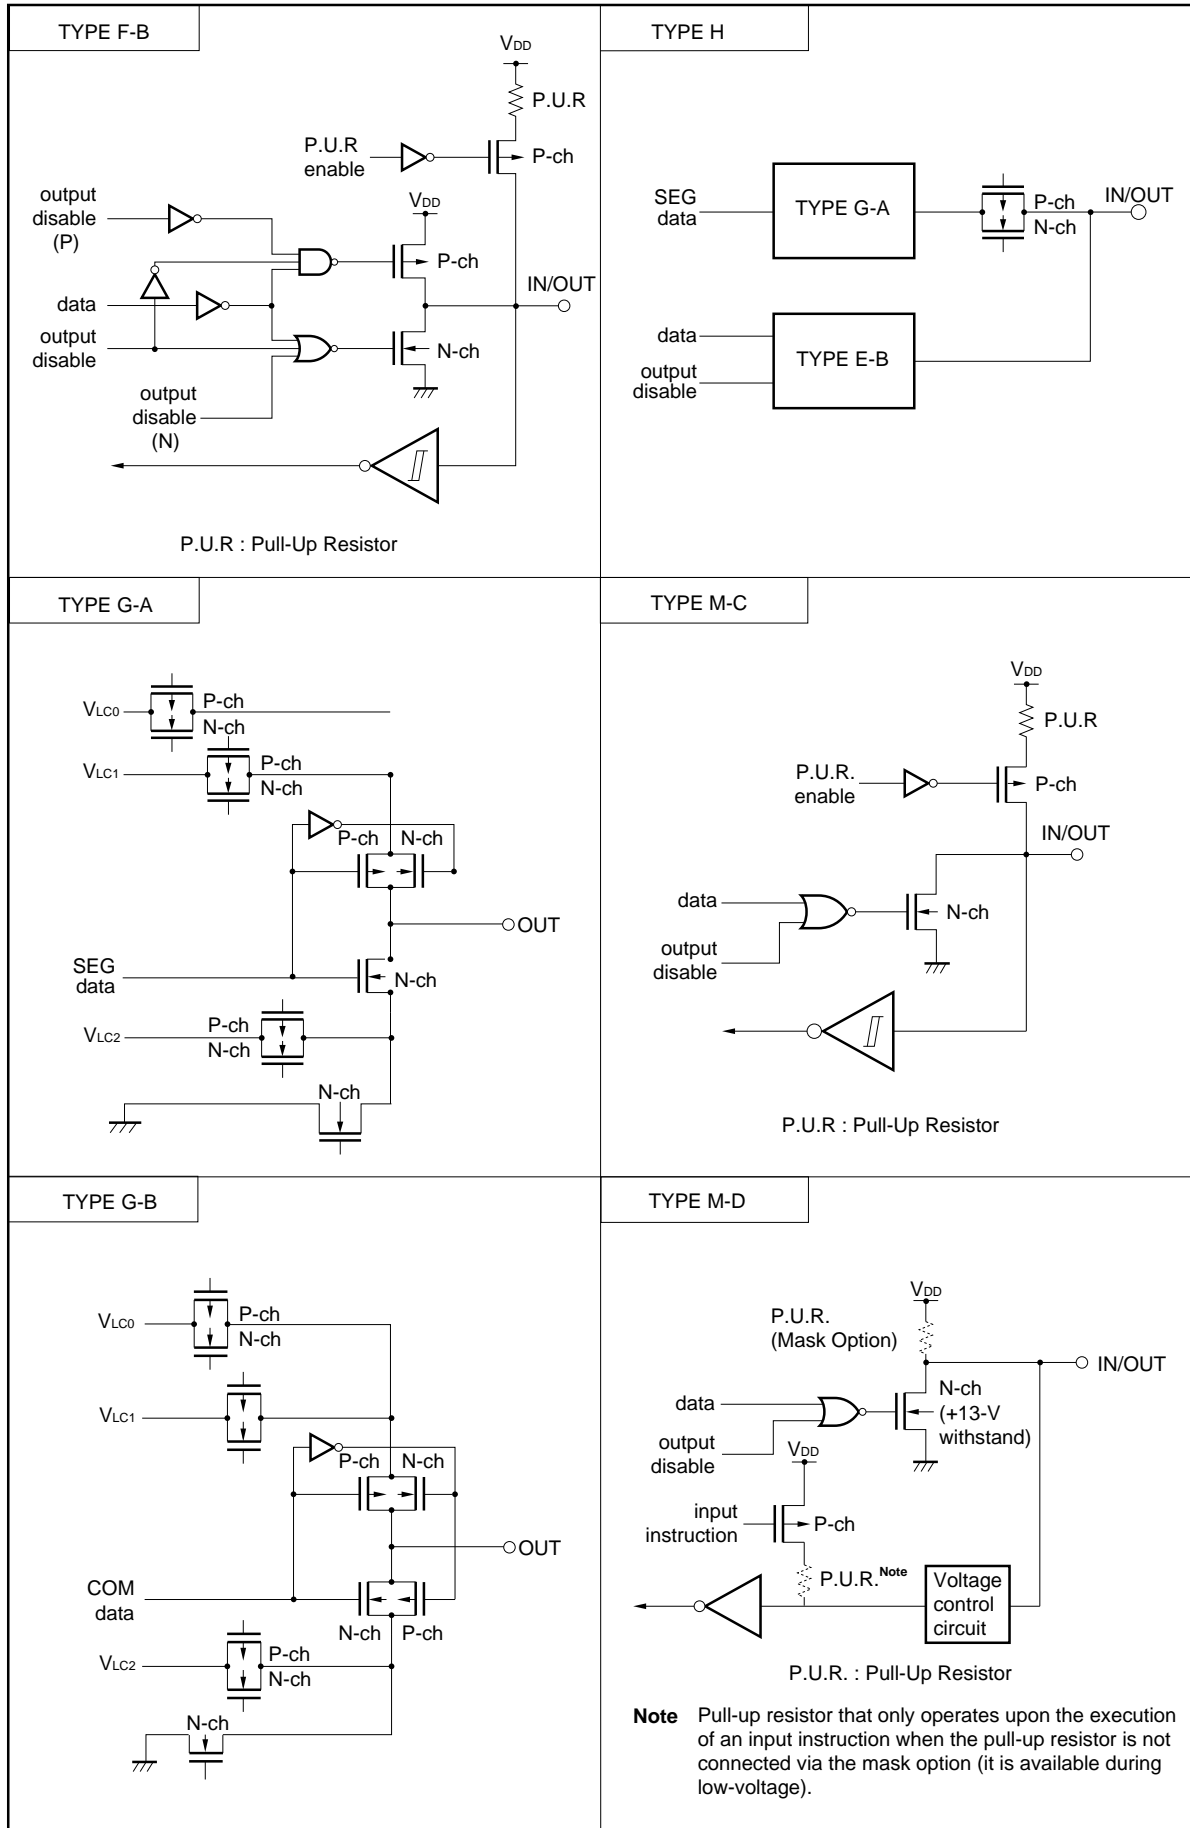

Note Characters in parentheses indicate the Schmitt-trigger input.

3.3 Pin Input/Output Circuits

The μPD753208 pin input/output circuits are shown schematically.

(1/2)

3.4 Recommended Connections for Unused Pins

★

Table 3-1. List of Recommended Connections for Unused Pins

Pin	Recommended Connection	
P00/INT4	Connect to V _{SS} or V _{DD}	
P01/SCK	Connect individually to V _{SS} or V _{DD} via a resistor	
P02/SO/SB0		
P03/SI/SB1	Connect to V _{SS}	
P10/INT0	Connect to V _{SS} or V _{DD}	
P13/TI0		
P20/PTO0	Input state: Connect individually to V _{SS} or V _{DD} via a resistor Output state: No connection	
P21/PTO1		
P22/PCL/PTO2		
P23/BUZ		
P30/LCDCL		
P31/SYNC		
P32		
P33		
P50 to P53		Input state : Connect to V _{SS} Output state : Connect to V _{SS} (Do not connect pull-up resistor in the mask option)
P60/KR0 to P63/KR3		Input state : Connect individually to V _{SS} or V _{DD} via a resistor Output state : No connection
S0 to S15	No connection	
COM0 to COM3		
S16/P93 to S19/P90	Input state: Connect individually to V _{SS} or V _{DD} via a resistor	
S20/P83 to S23/P80	Output state: No connection	
V _{LC0} to V _{LC2}	Connect to V _{SS}	
BIAS	Only if all of V _{LC0} to V _{LC2} are unused, connect to V _{SS} . In other cases, no connection.	
IC	Connect to V _{DD} directly	

4 SWITCHING FUNCTION BETWEEN Mk I MODE AND Mk II MODE

4.1 Difference Between Mk I and Mk II Modes

The CPU of the μPD753208 has the following two modes: Mk I and Mk II, either of which can be selected. The mode can be switched by bit 3 of the Stack Bank Select register (SBS).

- Mk I mode: Upward compatible with the μPD75308B. Can be used in the 75XL CPU with a ROM capacity of up to 16 Kbytes.
- Mk II mode: Incompatible with μPD75308B. Can be used in all the 75XL CPU including those products whose ROM capacity is more than 16 Kbytes.

Table 4-1. Differences between Mk I Mode and Mk II Mode

	Mk I mode	Mk II mode
Number of stack bytes for subroutine instructions	2 bytes	3 bytes
BRA ! addr1 instruction CALLA ! addr1 instruction	Not available	Available
CALL ! addr instruction	3 machine cycles	4 machine cycles
CALLF ! faddr instruction	2 machine cycles	3 machine cycles

★ **Caution** The MkII mode supports a program area exceeding 16 Kbytes for the 75X and 75XL Series. Software compatibility with products whose program memory exceeds 16 Kbytes can be raised by using this mode.

When the MkII mode is selected, the number of stack bytes increases by one byte per stack during subroutine call instruction execution compared with the MkI mode. When the !faddr instruction is used, the length of each machine cycle increases by 1 machine cycle. Therefore, if RAM efficiency or processing speed is emphasized over software compatibility, use of the MkI mode is recommended.

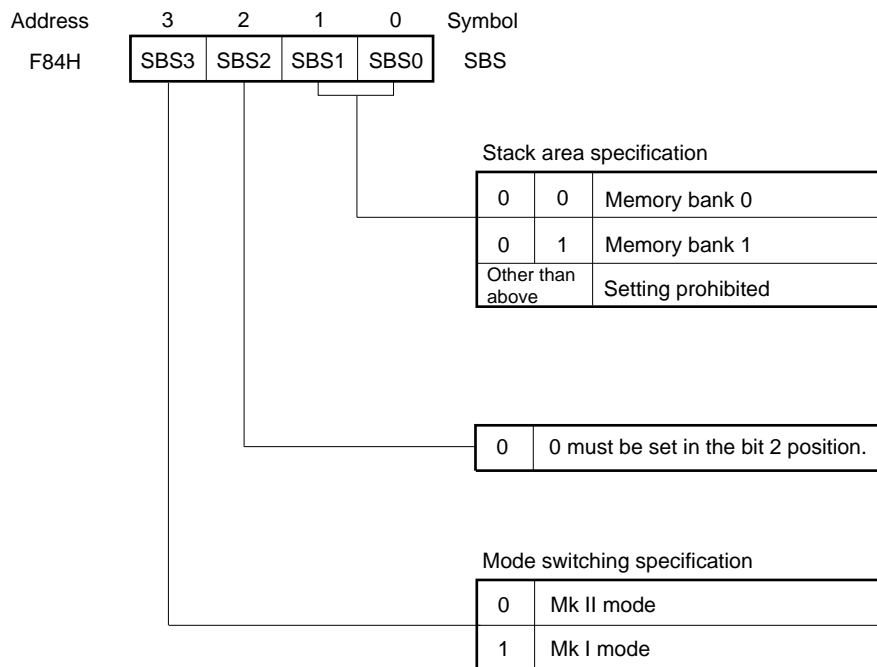

4.2 Setting Method of Stack Bank Select Register (SBS)

Switching between the Mk I mode and Mk II mode can be done by the SBS. Figure 4-1 shows the format.

The SBS is set by a 4-bit memory manipulation instruction. When using the Mk I mode, the SBS must be initialized to 100xB^{Note} at the beginning of a program. When using the Mk II mode, it must be initialized to 000xB^{Note}.

Note The desired numbers must be set in the × positions.

Figure 4-1. Stack Bank Select Register Format

Caution Since SBS. 3 is set to “1” after a RESET signal is generated, the CPU operates in the Mk I mode. When executing an instruction in the Mk II mode, set SBS. 3 to “0” to select the Mk II mode.

5. MEMORY CONFIGURATION

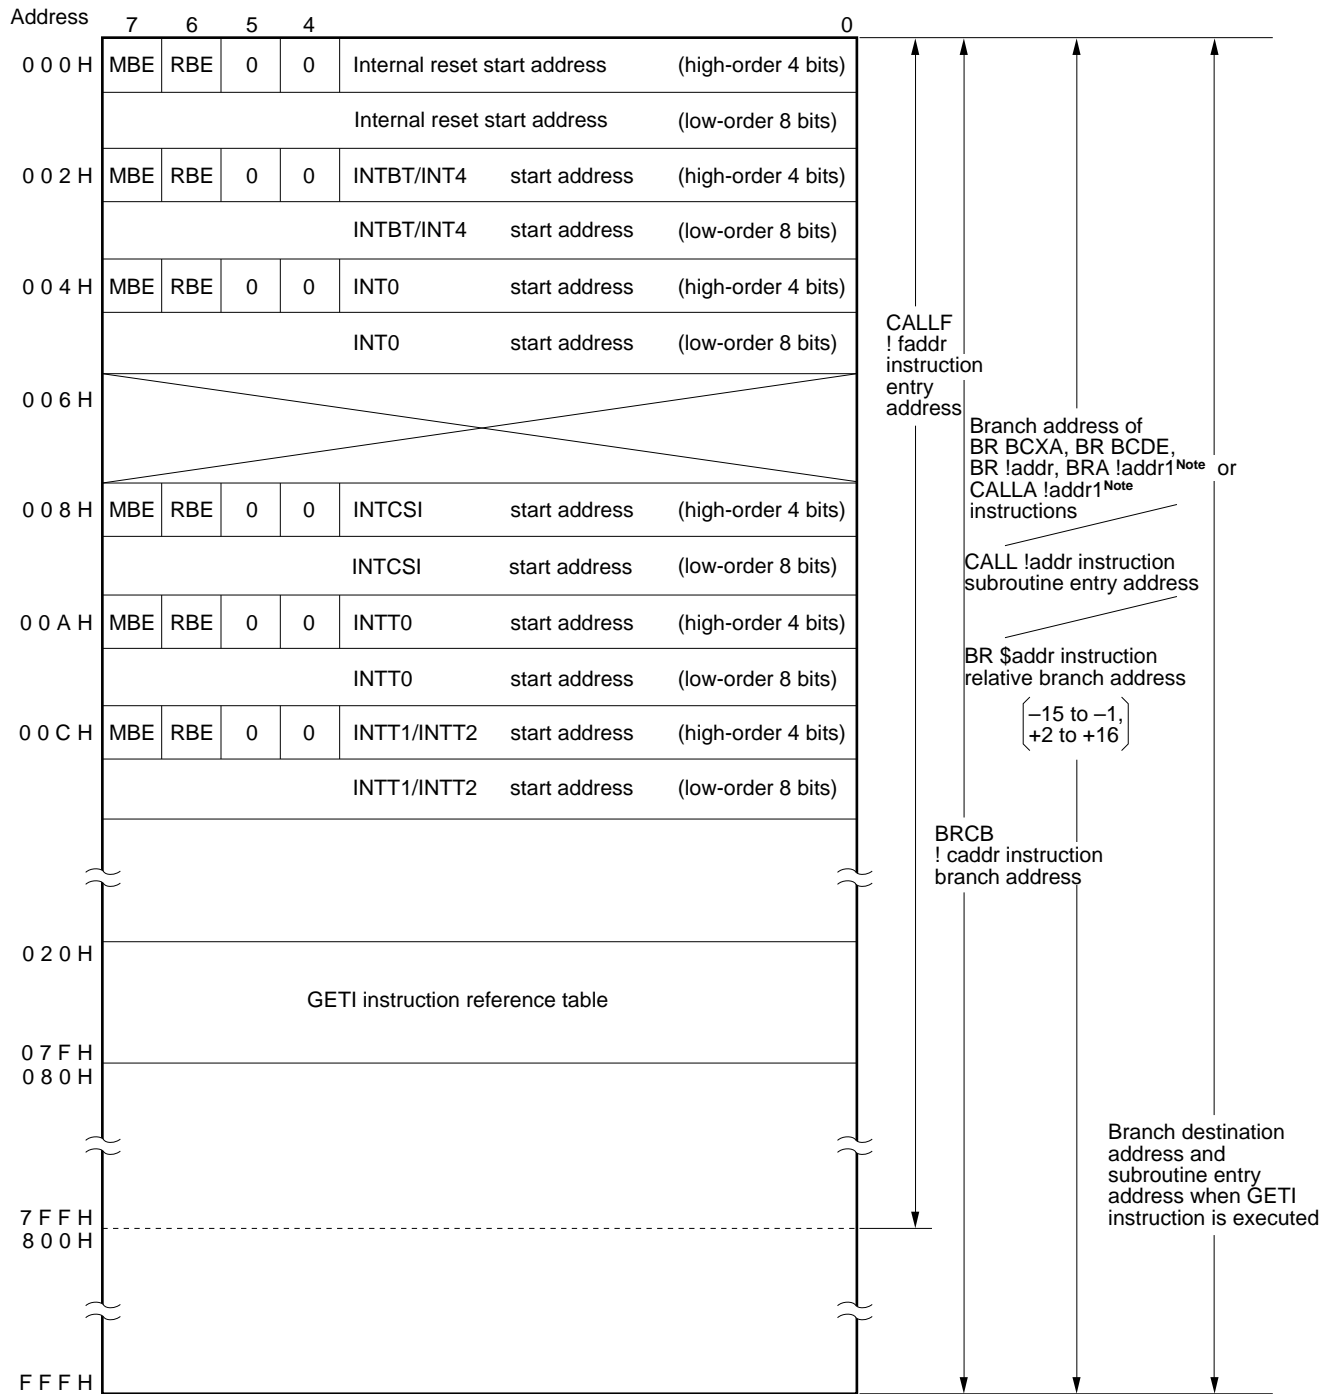

- **Program Memory (ROM)** 4096 × 8 bits (μ PD753204)
.... 6144 × 8 bits (μ PD753206)
.... 8192 × 8 bits (μ PD753208)
 - Addresses 0000H and 0001H
Vector table wherein the program start address and the values set for the RBE and MBE at the time a $\overline{\text{RESET}}$ signal is generated are written. Reset and start are possible at an arbitrary address.
 - Addresses 0002H to 000DH
Vector table wherein the program start address and values set for the RBE and MBE by the vectored interrupts are written. Interrupt execution can be started at an arbitrary address.
 - Addresses 0020H to 007FH
Table area referenced by the GETI instruction ^{Note}.

Note The GETI instruction realizes a 1-byte instruction on behalf of an arbitrary 2-byte instruction, 3-byte instruction, or two 1-byte instructions. It is used to decrease the program steps.

- **Data Memory (RAM)**
 - Data area ... 512 words × 4 bits (000H to 1FFH)
 - Peripheral hardware area ... 128 words × 4 bits (F80H to FFFH)

Figure 5-1. Program Memory Map (1/3)

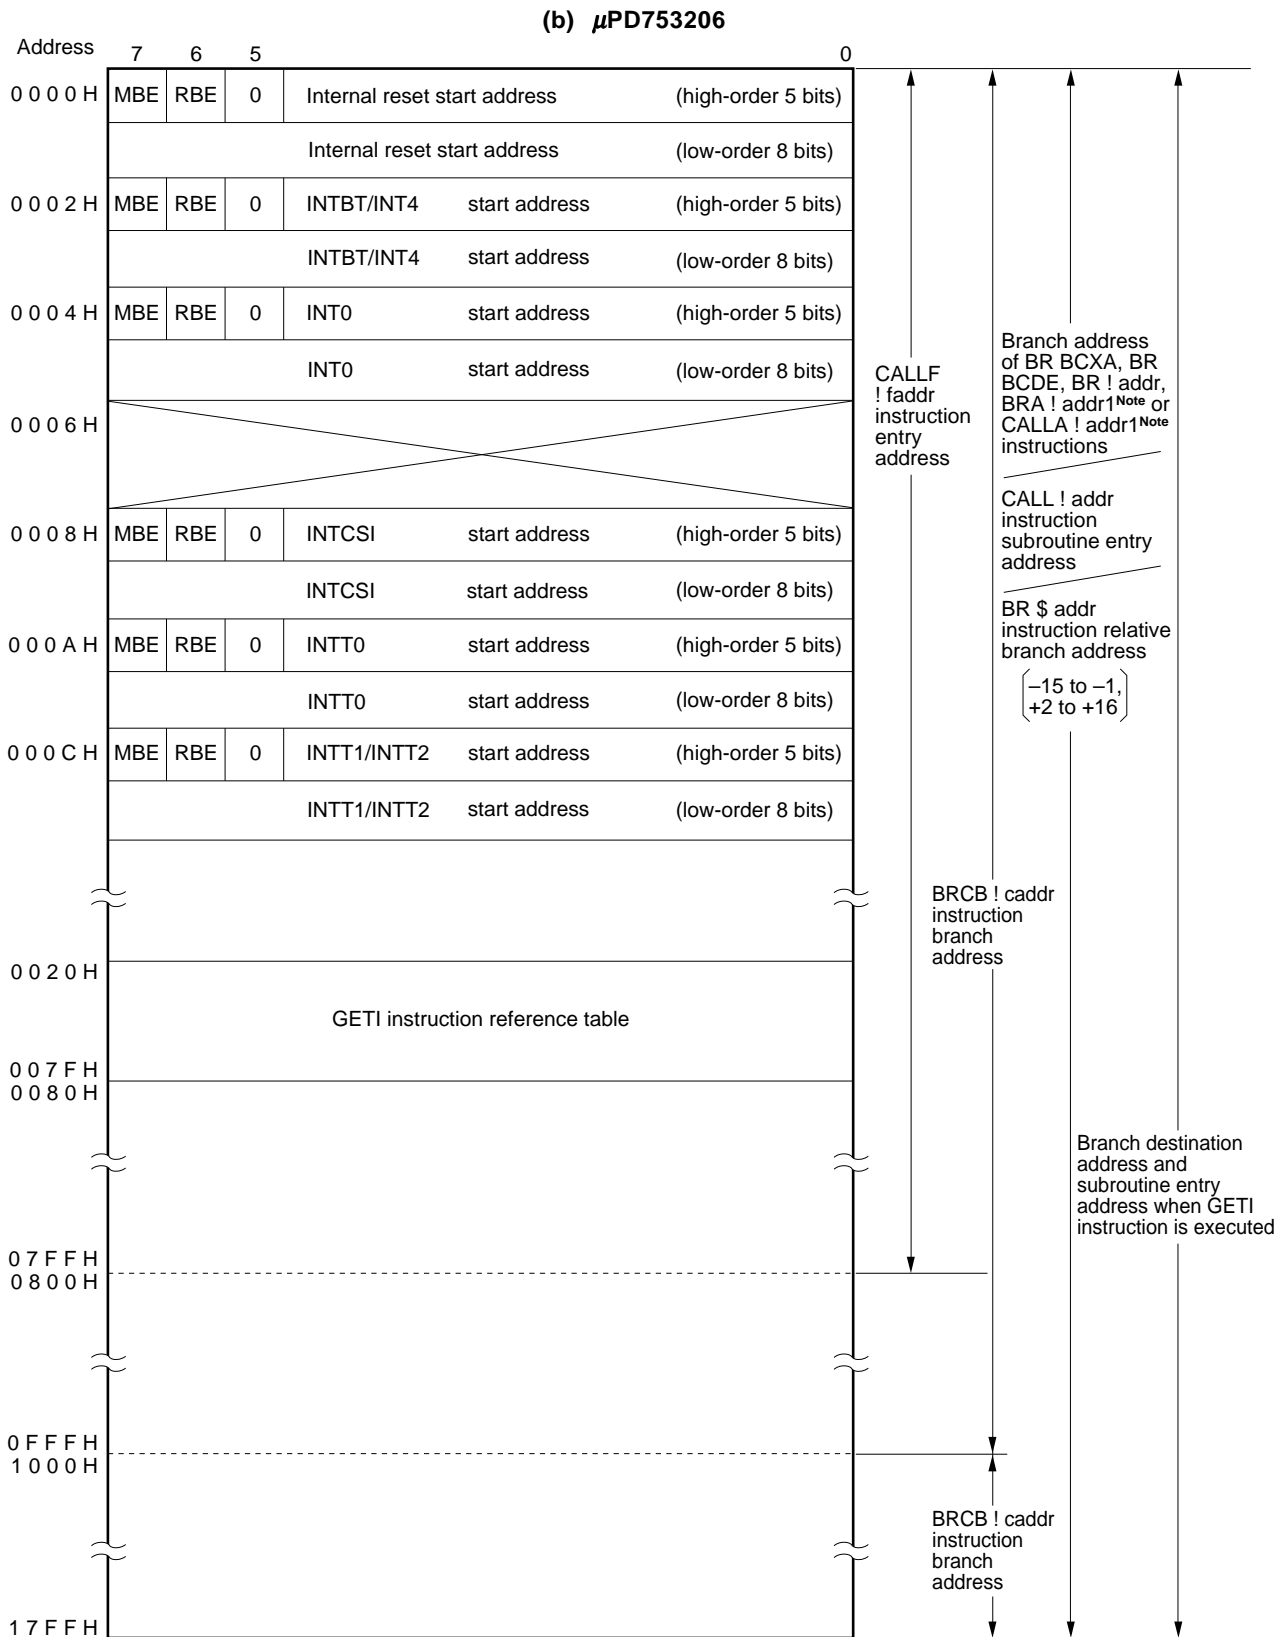

(a) μPD753204

Note Can be used only in the Mk II mode.

Remark In addition to the above, a branch can be taken to the address indicated by changing only the low-order eight bits of PC by executing the BR PCDE or BR PCXA instruction.

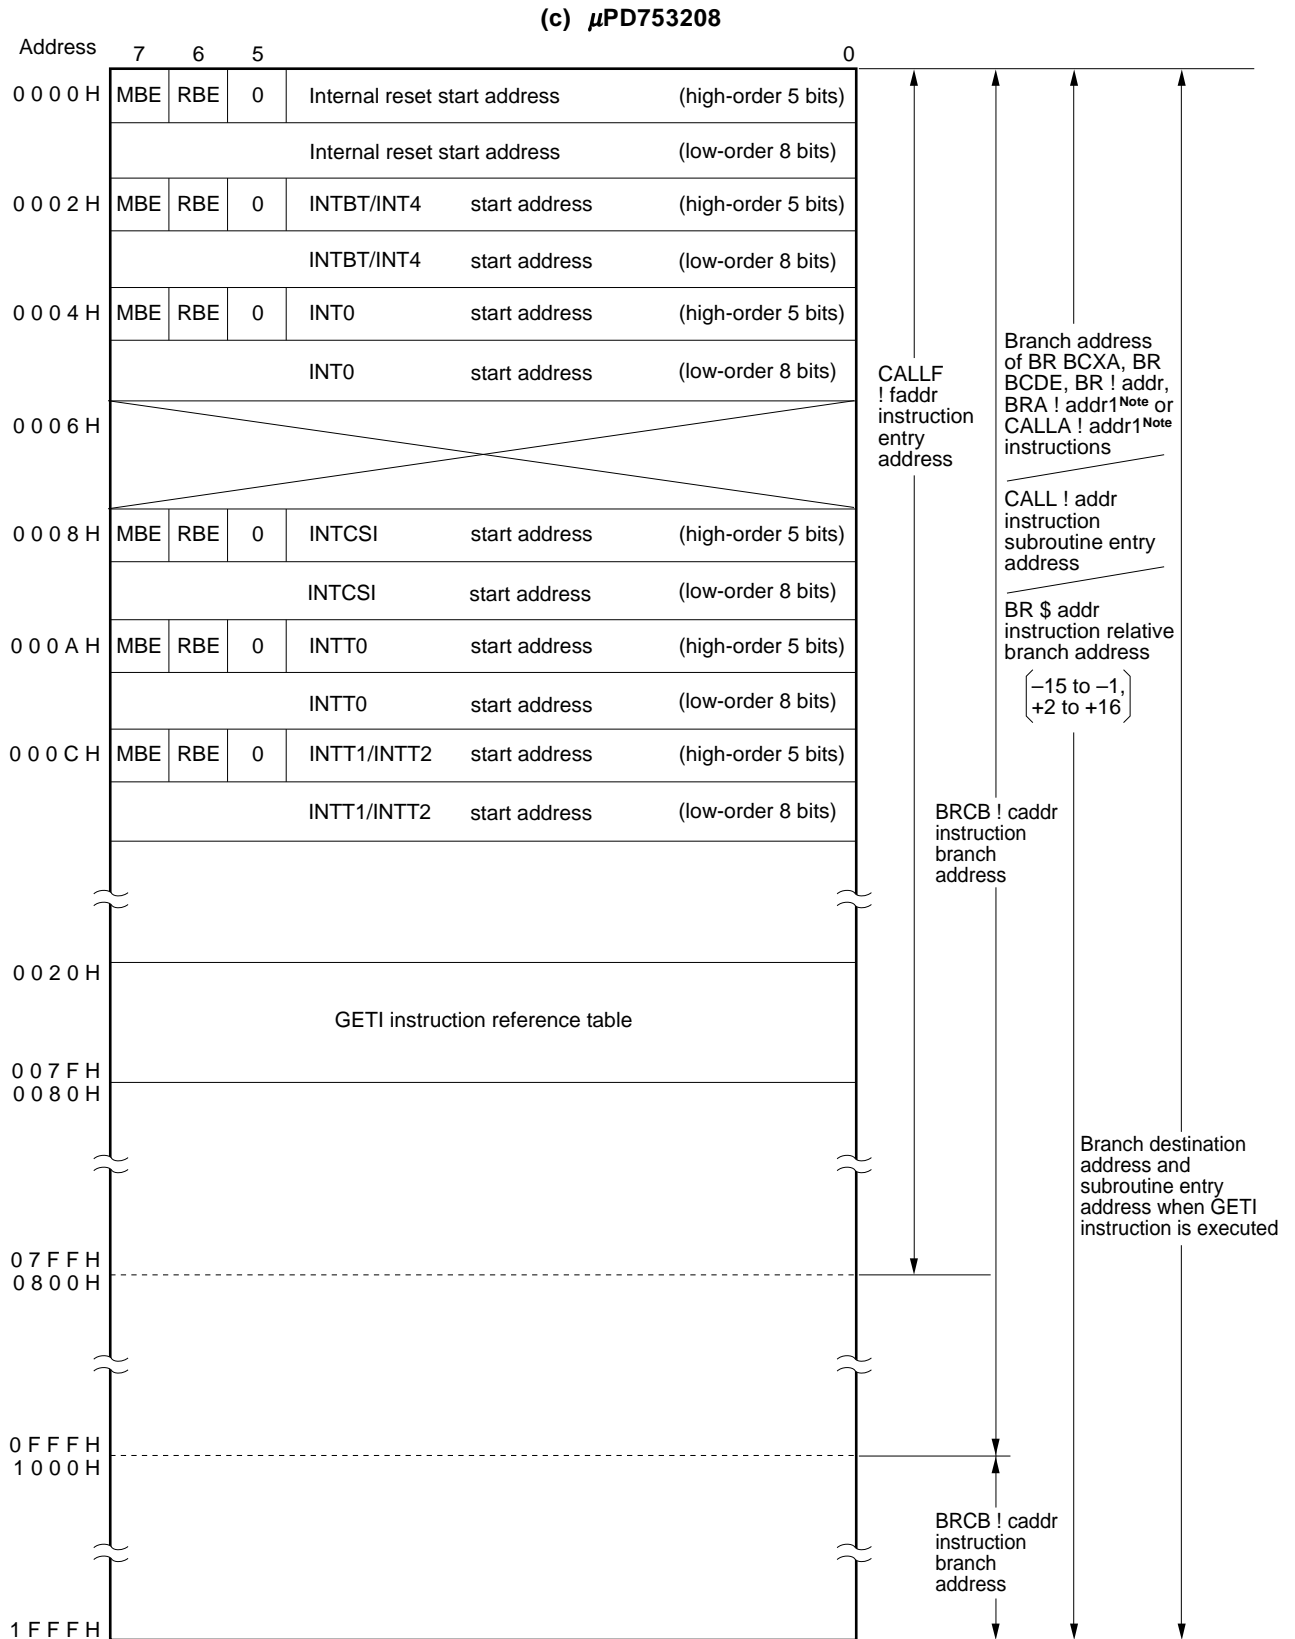

Figure 5-1. Program Memory Map (2/3)

Note Can be used only in the Mk II mode.

Remark In addition to the above, a branch can be taken to the address indicated by changing only the low-order eight bits of PC by executing the BR PCDE or BR PCXA instruction.

Figure 5-1. Program Memory Map (3/3)

Note Can be used only in the Mk II mode.

Remark In addition to the above, a branch can be taken to the address indicated by changing only the low-order eight bits of PC by executing the BR PCDE or BR PCXA instruction.

Figure 5-2. Data Memory Map

Note As a stack area, either memory bank 0 or 1 can be selected.

6. PERIPHERAL HARDWARE FUNCTION

6.1 Digital I/O Port

There are three kinds of I/O ports.

- CMOS input ports (Ports 0, 1) : 6
 - CMOS input/output ports (Ports 2, 3, 6, 8, 9) : 20
 - N-ch open-drain input/output ports (Port 5) : 4
-
- Total 30

Table 6-1. Types and Features of Digital Ports

Port	Function	Operation and features		Remarks
PORT0	4-bit input	The alternate function pins have an output function with operation mode when using the serial interface function.		Also used for the INT4, $\overline{\text{SCK}}$, SO/SB0, and SI/SB1 pins.
PORT1	1-bit input	2-bit input dedicated port		Also used for the INT0 and T10.
PORT2	4-bit I/O	Can be set to input mode or output mode in 4-bit units.		Also used for the PTO0 to PTO2, PCL, and BUZ pins.
PORT3		Can be set to input mode or output mode bit-wise.		
PORT5	4-bit I/O (N-channel open-drain, 13-V withstand)	Can be set to input mode or output mode in 4-bit units. On-chip pull-up resistor can be specified by mask option bit-wise.		—
PORT6	4-bit I/O	Can be set to input mode or output mode bit-wise.		Also used for the KR0 to KR3 pins.
PORT8		Can be set to input mode or output mode in 4-bit units.	Ports 8 and 9 are paired and data can be input/output in 8-bit units.	Also used for the S20 to S23 pins.
PORT9				Also used for the S16 to S19 pins.

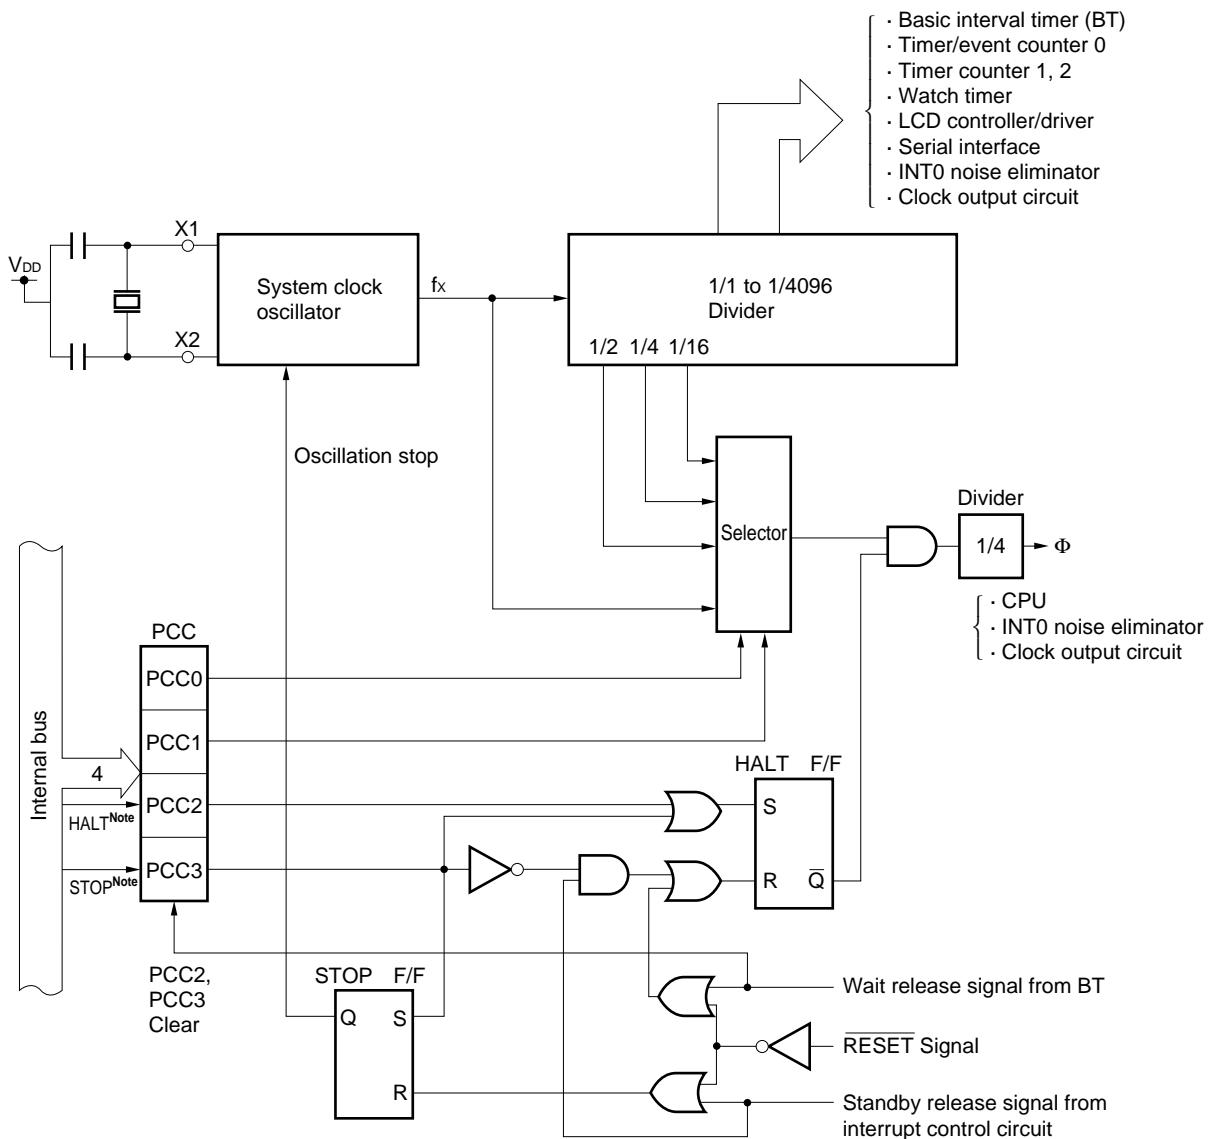

6.2 Clock Generator

The clock generator provides the clock signals to the CPU and peripheral hardware and its configuration is shown in Figure 6-1.

The operation of the clock generator is determined by the Processor Clock Control Register (PCC). The instruction execution time can also be changed.

- 0.95, 1.91, 3.81, 15.3 μs (system clock: @ 4.19-MHz operation)
- 0.67, 1.33, 2.67, 10.7 μs (system clock: @ 6.0-MHz operation)

Figure 6-1. Clock Generator Block Diagram

Note Instruction execution

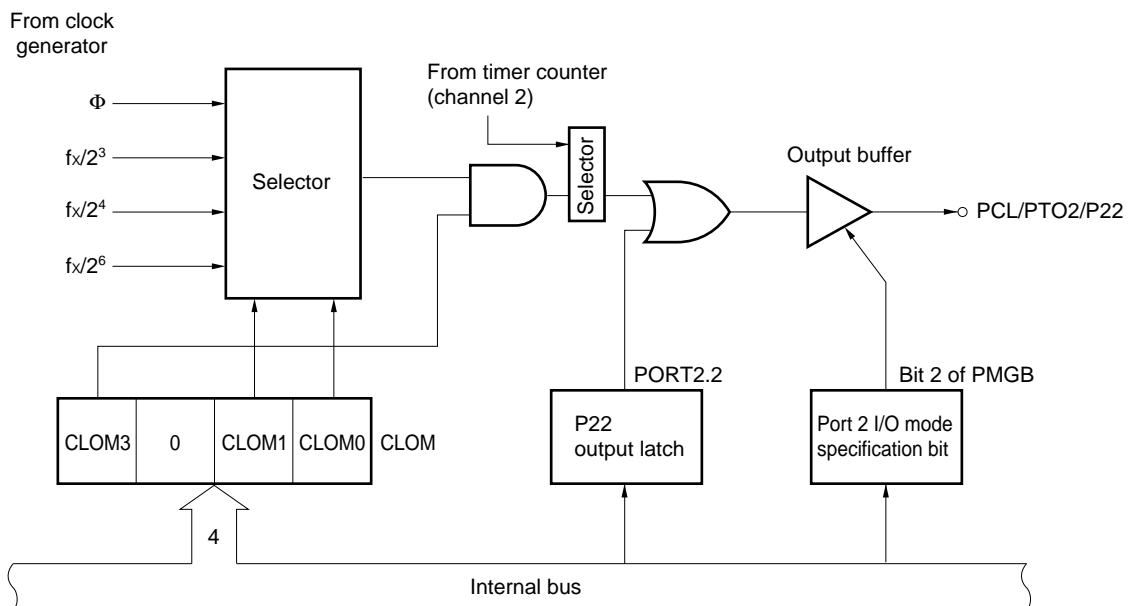

- Remarks**
1. f_x = System clock frequency
 2. Φ = CPU clock
 3. PCC: Processor Clock Control Register
 4. One clock cycle (t_{cy}) of the CPU clock is equal to one machine cycle of the instruction.

6.3 Clock Output Circuit

The clock output circuit is provided to output the clock pulses from the PCL pin (also functions as P22 or PTO2) to the remote control wave outputs and peripheral LSIs.

- Clock Output (PCL) : Φ , 524, 262, 65.5 kHz (system clock: @ 4.19-MHz operation)
 Φ , 750, 375, 93.8 kHz (system clock: @ 6.0-MHz operation)

Figure 6-2. Clock Output Circuit Block Diagram

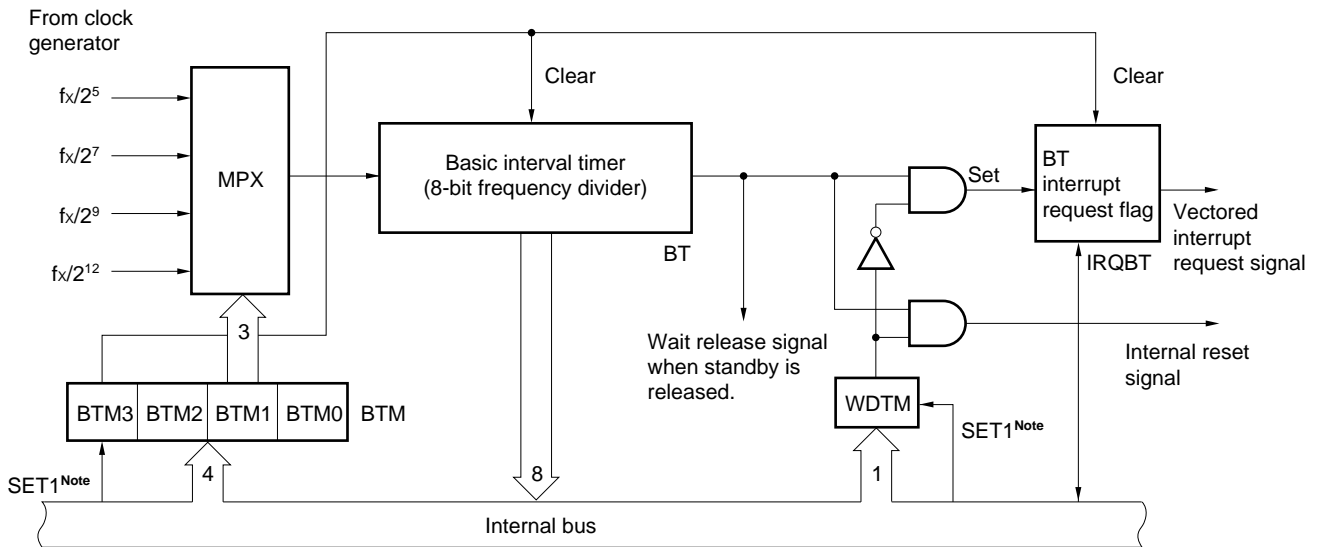

Remark Special care has been taken in designing the chip so that small-width pulses may not be output when switching clock output enable/disable.

6.4 Basic Interval Timer/Watchdog Timer

The basic interval timer/watchdog timer has the following functions.

- Interval timer operation to generate a reference time interrupt
- Watchdog timer operation to detect program runaway and reset the CPU
- Selects and counts the wait time when the standby mode is released
- Reads the contents of counting

Figure 6-3. Basic Interval Timer/Watchdog Timer Block Diagram

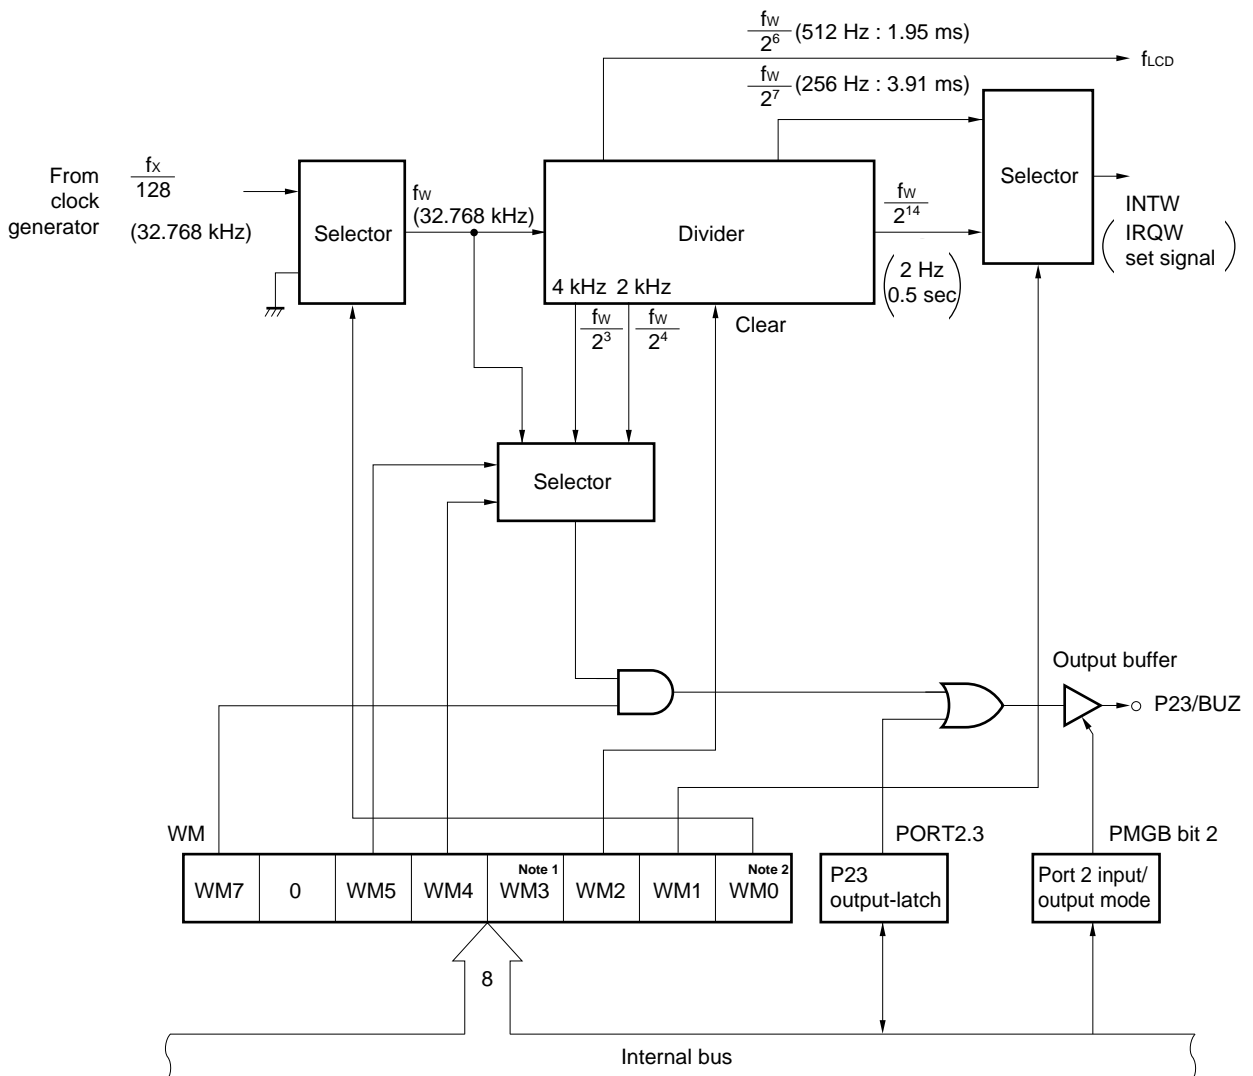

Note Instruction execution

6.5 Watch Timer

The μPD753208 has one watch timer channel, whose functions are as follows.

- Sets the test flag (IRQW) with 0.5 sec interval. The standby mode can be released by the IRQW.
- 0.5 sec interval can be created with the system clock (4.194304 MHz)
- Convenient for program debugging and checking as interval becomes 128 times longer (3.91 ms) with the fast feed mode.
- Outputs a frequency (2.048, 4.096, or 32.768 kHz) to the BUZ pin (P23), usable for buzzer and trimming of system clock frequencies.
- Clears the frequency divider to make the clock start with zero seconds.

Figure 6-4. Watch Timer Block Diagram

- Notes**
1. WM3 is undefined while reading data.
 2. Be sure to set WM0 to 0.

Remark The values enclosed in parentheses are applied when $f_x = 4.194304$ MHz.

6.6 Timer/Event Counter

The μPD753208 provides one channel for timer/event counters and two channels for timer counters. Figures 6-5 to 6-7 show the block diagrams. Timer/event counter functions are as follows.

- Programmable interval timer operation
- Square wave output of any frequency to the PTO0 pin (n = 0 to 2).
- Event counter operation (Channel 0 only)
- Divides the frequency of signal input via the TI0 pin to 1-nth of the original signal and outputs the divided frequency to the PTO0 pin (frequency divider operation).
- Supplies the shift clock to the serial interface circuit.
- Reads the counting status.

The timer/event counter operates in the following four modes as set by the mode register.

Table 6-2. Operation Modes of Timer/Event Counter

Mode	Channel	Channel 0	Channel 1	Channel 2
	8-bit timer/event counter mode ^{Note 1}		A	A
	Gate control function	N/A ^{Note 2}	N/A	A
PWM pulse generator mode		N/A	N/A	A
16-bit timer counter mode		N/A	A	
	Gate control function	N/A ^{Note 2}	A	
Carrier generator mode		N/A	A	

- Notes**
1. Channel 0 only. 8-bit timer counter mode for channel 1 and channel 2
 2. Used for gate control signal generation

Remark A: Available
 N/A: Not available

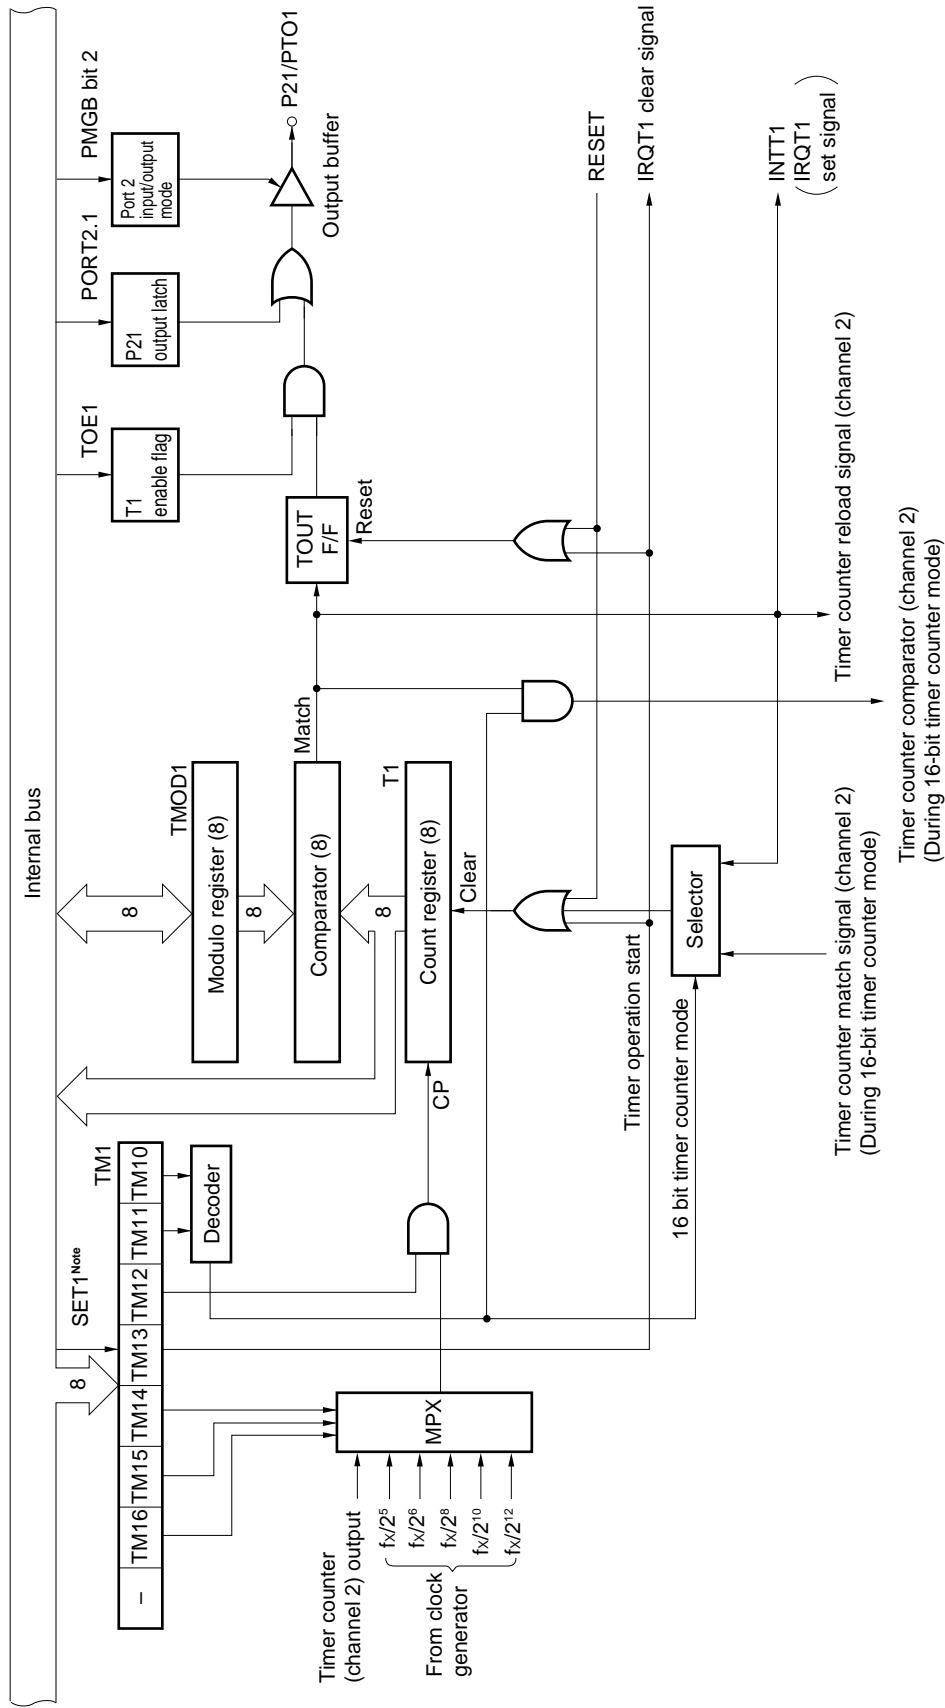

★ Figure 6-5. Timer/Event Counter Block Diagram (channel 0)

Note Execution of instruction

Caution When data is set to TM0, always set bit 1 to 0.

Figure 6-6. Timer/Event Counter Block Diagram (channel 1)

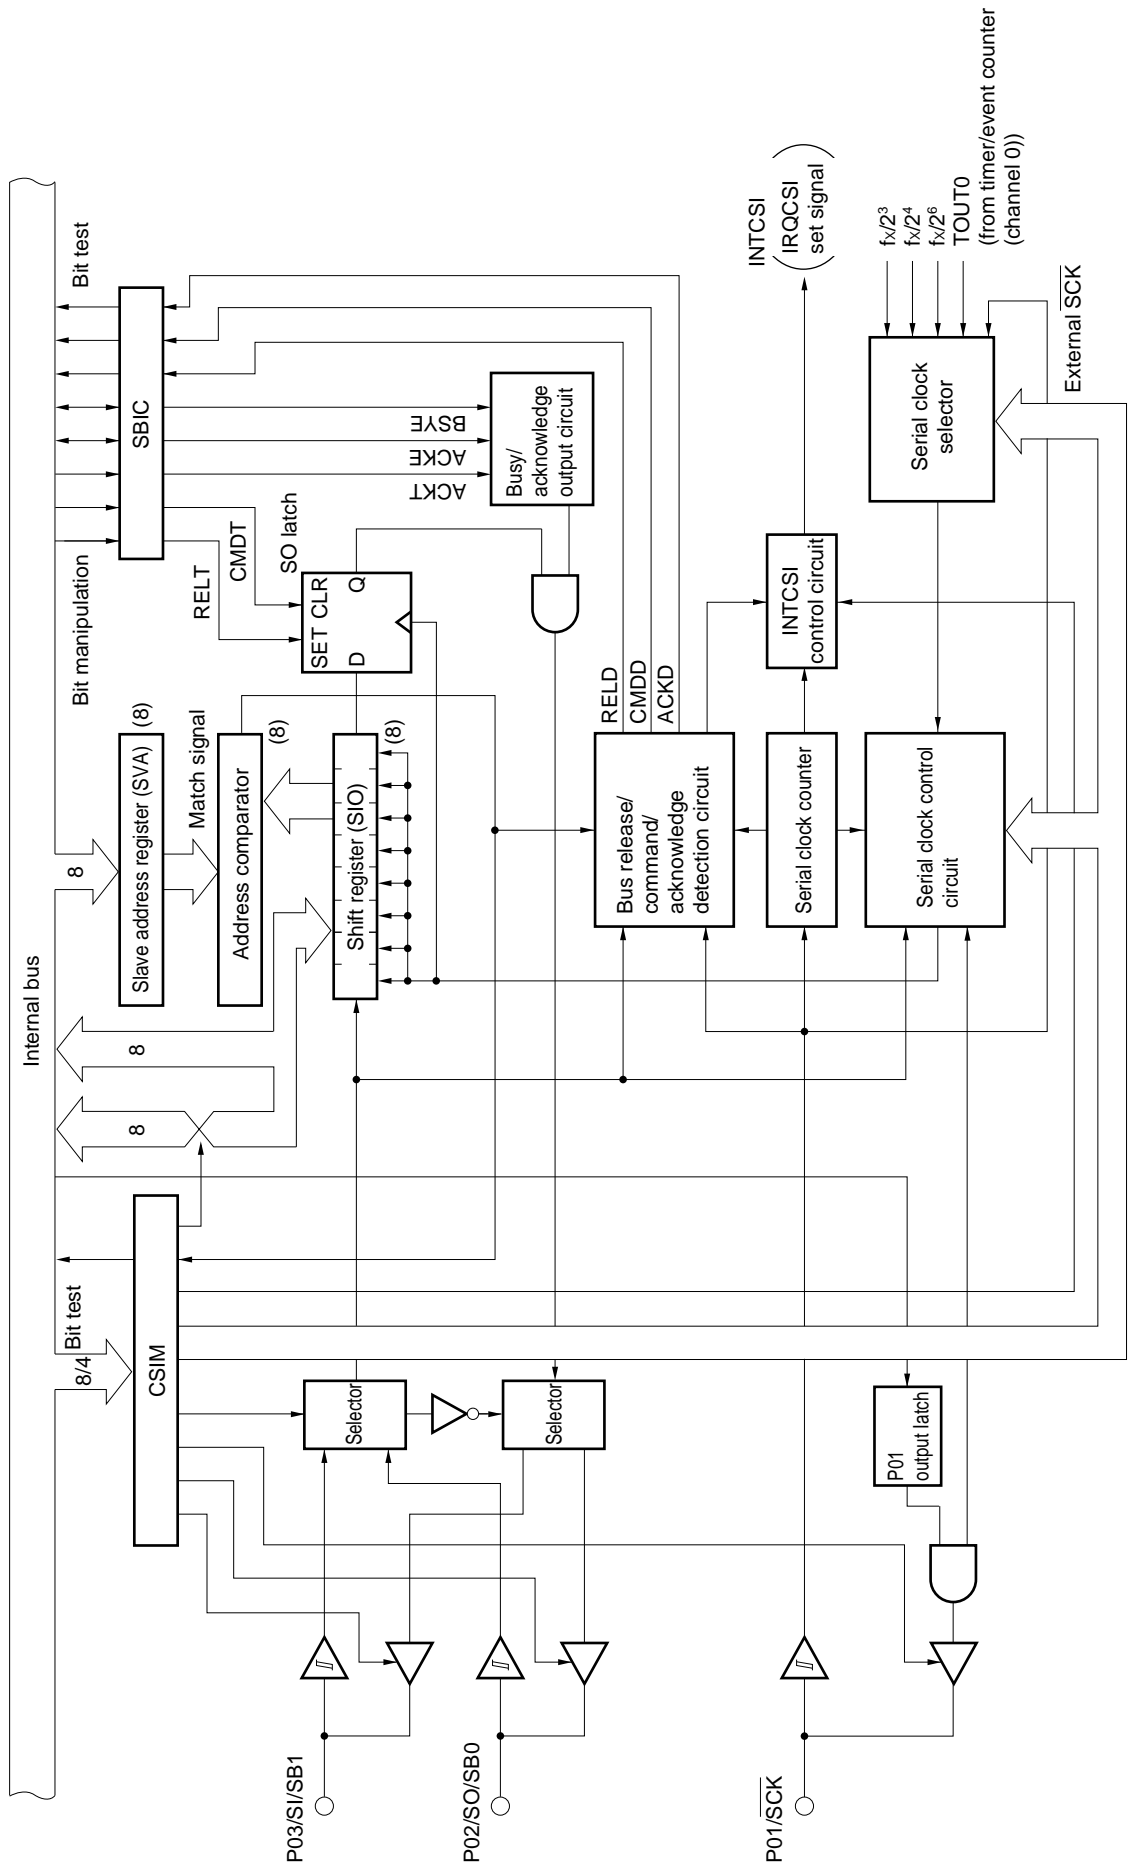

Note Execution of instruction

6.7 Serial Interface

The μ PD753208 incorporates a clock-synchronous 8-bit serial interface and can be used in the following four modes.

- Operation stop mode
- 3-wire serial I/O mode
- 2-wire serial I/O mode
- SBI mode (serial bus interface mode)

Figure 6-8. Serial Interface Block Diagram

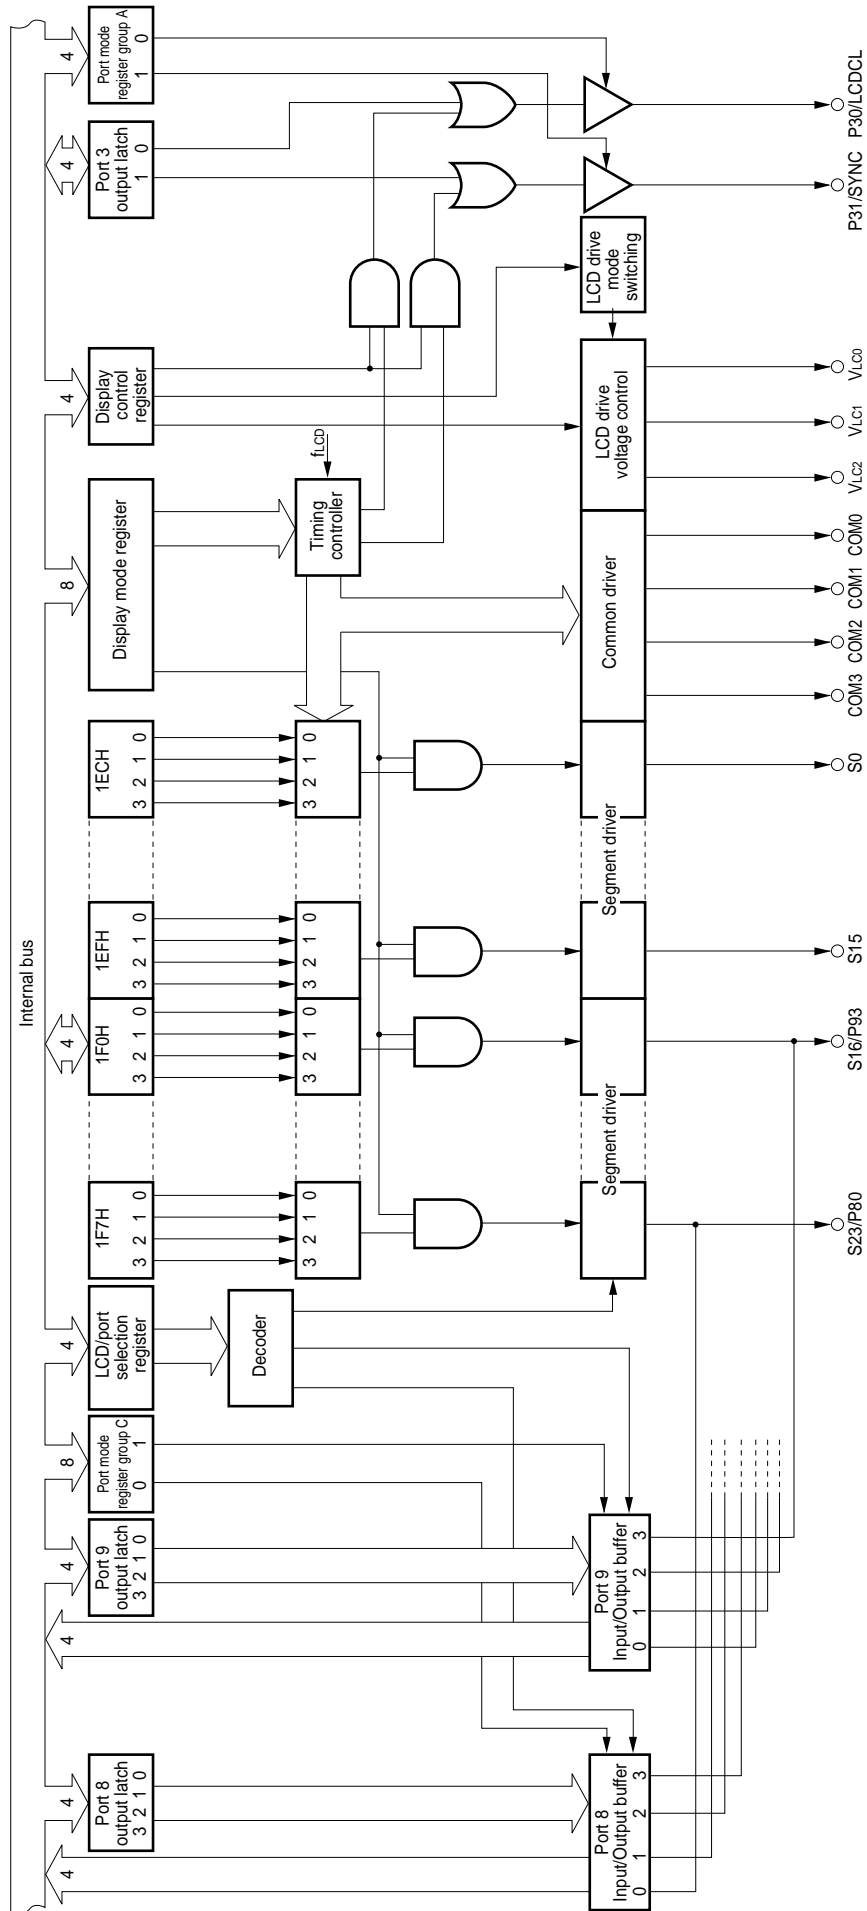

6.8 LCD Controller/Driver

The μ PD753208 incorporates a display controller which generates segment and common signals according to the display data memory contents and incorporates segment and common drivers which can drive the panel directly.

The μ PD753208 LCD controller/driver functions are as follows:

- Display data memory is read automatically by DMA operation and segment and common signals are generated.
- Display mode can be selected from among the following five:
 - <1> Static
 - <2> 1/2 duty (time multiplexing by 2), 1/2 bias
 - <3> 1/3 duty (time multiplexing by 3), 1/2 bias
 - <4> 1/3 duty (time multiplexing by 3), 1/3 bias
 - <5> 1/4 duty (time multiplexing by 4), 1/3 bias
- A frame frequency can be selected from among four in each display mode.
- A maximum of 12 segment signal output pins (S12 to S23) and four common signal output pins (COM0 to COM3).
- The segment signal output pins (S16 to S23) can be changed to the I/O ports (PORT8 and PORT9).
- Split-resistor can be incorporated to supply LCD drive power. (Mask option)
 - Various bias methods and LCD drive voltages can be applicable.
 - When display is off, current flowing through the split resistor is cut.
- Display data memory not used for display can be used for normal data memory.

Figure 6-9. LCD Controller/Driver Block Diagram

6.9 Bit Sequential Buffer 16 Bits

The bit sequential buffer (BSB) is a special data memory for bit manipulation and the bit manipulation can be easily performed by changing the address specification and bit specification in sequence, therefore it is useful when processing large data bit-wise.

Figure 6-10. Bit Sequential Buffer Format

- Remarks**
1. In pmem.@L addressing, the specified bit moves corresponding to the L register.
 2. In pmem.@L addressing, the BSB can be manipulated regardless of MBE/MSB specification.

7. INTERRUPT FUNCTION AND TEST FUNCTION

There are seven interrupt sources and two test sources in the μPD753208.
The interrupt control circuit of the μPD753208 has the following functions.

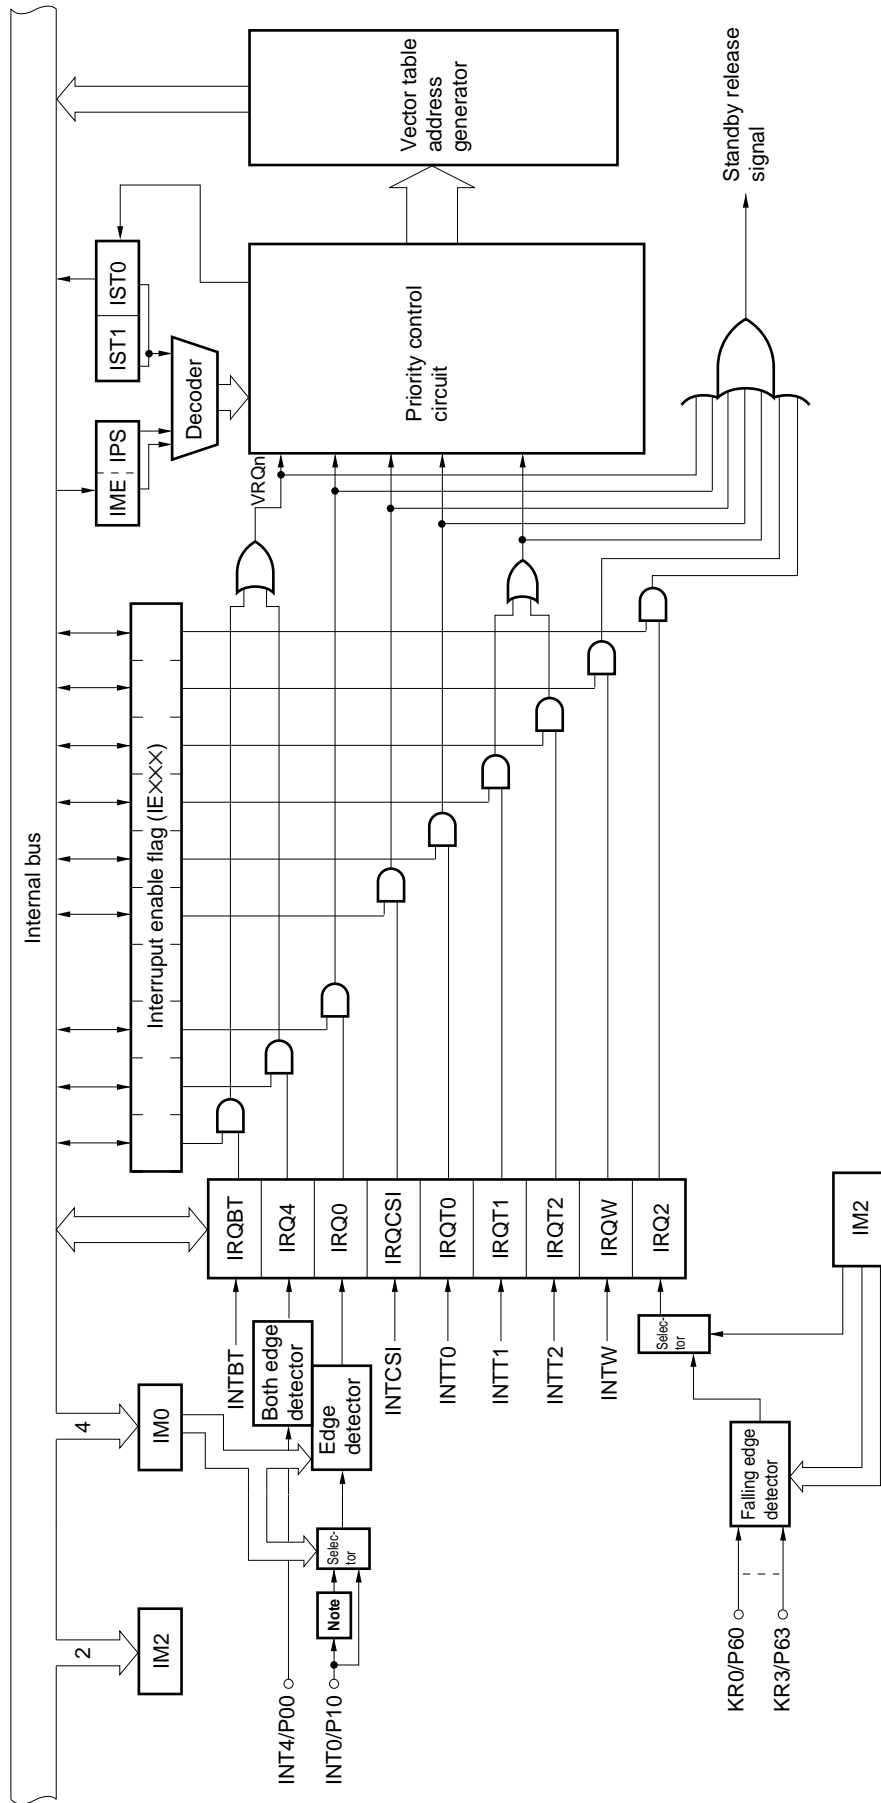

(1) Interrupt function

- Vectored interrupt function for hardware control, enabling/disabling the interrupt acceptance by the interrupt enable flag (IE_{xxx}) and interrupt master enable flag (IME).
- Can set any interrupt start address.
- Multiple interrupts wherein the order of priority can be specified by the interrupt priority select register (IPS).
- Test function of interrupt request flag (IRQ_{xxx}). An interrupt generated can be checked by software.
- Release the standby mode. A release interrupt can be selected by the interrupt enable flag.

(2) Test function

- Test request flag (IRQ_{xxx}) generation can be checked by software.
- Release the standby mode. The test source to be released can be selected by the test enable flag.

Figure 7-1. Interrupt Control Circuit Block Diagram

Note Noise eliminator (Standby release is disabled when noise eliminator is selected.)

8. STANDBY FUNCTION

In order to save power dissipation while a program is in standby mode, two types of standby modes (STOP mode and HALT mode) are provided for the μPD753208.

Table 8-1. Operation Status in Standby Mode

Item		Mode	STOP mode	HALT mode
Set instruction			STOP instruction	HALT instruction
Operation status	Clock generator		The system clock stops oscillation.	Only the CPU clock Φ halts (oscillation continues).
	Basic interval timer/ Watchdog timer		Operation stops.	Operable only when the system clock is oscillated. (The IRQBT is set in the reference interval).
	Serial interface		Operable only when an external \overline{SCK} input is selected as the serial clock.	Operable
	Timer/event counter		Operable only when a signal input to the TIO pin is specified as the count clock.	Operable
	Watch timer		Operation stops.	Operable
	LCD controller/driver		Operation stops.	Operable
	External interrupt		The INT4 is operable. Only the INT0 is not operated ^{Note} .	
	CPU		Operation stops.	
Release signal			Interrupt request signal sent from the operable hardware enabled by the interrupt enable flag or \overline{RESET} signal input.	

Note Can operate only when the noise eliminator is not used (IM02 = 1) by bit 2 of the edge detection mode register (IM0).

9. RESET FUNCTION

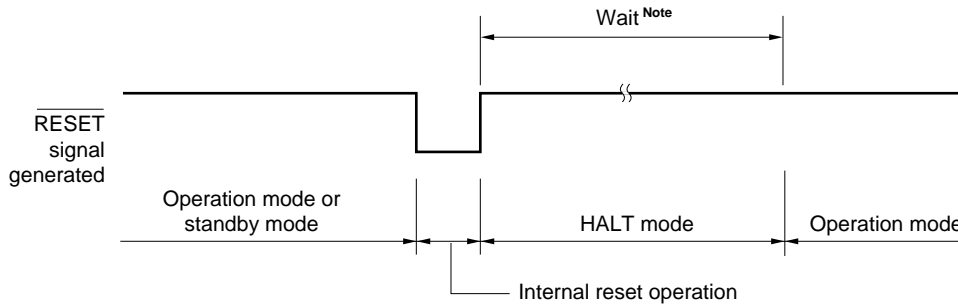

There are two reset inputs: external $\overline{\text{RESET}}$ signal and $\overline{\text{RESET}}$ signal sent from the basic interval timer/watchdog timer. When either one of the $\overline{\text{RESET}}$ signals are input, an internal $\overline{\text{RESET}}$ signal is generated. Figure 9-1 shows the circuit diagram of the above two inputs.

Figure 9-1. Configuration of Reset Function

Each hardware is initialized by the $\overline{\text{RESET}}$ signal generation as listed in Table 9-1. Figure 9-2 shows the timing chart of the reset operation.

Figure 9-2. Reset Operation by $\overline{\text{RESET}}$ Signal Generation

Note The following two times can be selected by the mask option.

$2^{17}/f_x$ (21.8 ms: @ 6.0-MHz operation, 31.3 ms: @ 4.19-MHz operation)

$2^{15}/f_x$ (5.46 ms: @ 6.0-MHz operation, 7.81 ms: @ 4.19-MHz operation)

Table 9-1. Status of Each Device After Reset (1/2)

Hardware		RESET signal generation in the standby mode	RESET signal generation during operation	
Program counter (PC)	μPD753204	Sets the low-order 4 bits of program memory's address 0000H to PC11 to PC8 and the contents of address 0001H to PC7 to PC0.	Sets the low-order 4 bits of program memory's address 0000H to PC11 to PC8 and the contents of address 0001H to PC7 to PC0.	
	μPD753206, μPD753208	Sets the low-order 5 bits of program memory's address 0000H to PC12 to PC8 and the contents of address 0001H to PC7 to PC0.	Sets the low-order 5 bits of program memory's address 0000H to PC12 to PC8 and the contents of address 0001H to PC7 to PC0.

	Pull-up resistor setting register (POGA, B)	0	0
Bit sequential buffer (BSB0 to BSB3)		Held	Undefined

10. MASK OPTION

The μ PD753208 has the following mask options.

- P50 to P53 mask options
Selects whether or not to connect an internal pull-up resistor.
 - <1> Connect pull-up resistor internally bit-wise.
 - <2> Do not connect pull-up resistor internally.
- V_{LC0} to V_{LC2} pins, BIAS pins mask option
Selects whether or not to internally connect LCD-driving split resistors.
 - <1> Do not connect split resistor internally.
 - <2> Connect four 10-k Ω (typ.) split resistors simultaneously internally.
 - <3> Connect four 100-k Ω (typ.) split resistors simultaneously internally.
- Standby function mask option
Selects the wait time with the $\overline{\text{RESET}}$ signal.
 - <1> $2^{17}/f_x$ (21.8 ms: When $f_x = 6.0$ MHz, 31.3 ms: When $f_x = 4.19$ MHz)
 - <2> $2^{15}/f_x$ (5.46 ms: When $f_x = 6.0$ MHz, 7.81 ms: When $f_x = 4.19$ MHz)

11. INSTRUCTION SET

(1) Expression formats and description methods of operands

The operand is described in the operand column of each instruction in accordance with the description method for the operand expression format of the instruction. For details, refer to "RA75X ASSEMBLER PACKAGE USERS' MANUAL—LANGUAGE (EEU-1363)". If there are several elements, one of them is selected. Capital letters and the + and – symbols are key words and are described as they are. For immediate data, appropriate numbers and labels are described. Instead of the labels such as mem, fmem, pmem, and bit, the symbols of the registers can be described. However, there are restrictions in the labels that can be described for fmem and pmem. For details, see the user's manual.

Representation format	Description method
reg reg1	X, A, B, C, D, E, H, L X, B, C, D, E, H, L
rp rp1 rp2 rp' rp'1	XA, BC, DE, HL BC, DE, HL BC, DE XA, BC, DE, HL, XA', BC', DE', HL' BC, DE, HL, XA', BC', DE', HL'
rpa rpa1	HL, HL+, HL–, DE, DL DE, DL
n4 n8	4-bit immediate data or label 8-bit immediate data or label
mem bit	8-bit immediate data or label ^{Note} 2-bit immediate data or label
fmem pmem	FB0H-FBFH, FF0H-FFFH immediate data or label FC0H-FFFH immediate data or label
addr addr1 (Only in the MKII mode) caddr faddr	000H-FFFH immediate data or label (μPD753204) 0000H-17FFH immediate data or label (μPD753206) 0000H-1FFFH immediate data or label (μPD753208) 000H-FFFH immediate data or label (μPD753204) 0000H-17FFH immediate data or label (μPD753206) 0000H-1FFFH immediate data or label (μPD753208) 12-bit immediate data or label 11-bit immediate data or label
taddr	20H-7FH immediate data (where bit 0 = 0) or label
PORTn IExxx RBn MBn	PORT0-PORT3, PORT5, PORT6, PORT8, PORT9 IEBT, IET0-IET2, IE0, IE2, IE4, IECS1, IEW RB0-RB3 MB0, MB1, MB15

Note mem can be only used for even address in 8-bit data processing.

(2) Legend in explanation of operation

A	: A register, 4-bit accumulator
B	: B register
C	: C register
D	: D register
E	: E register
H	: H register
L	: L register
X	: X register
XA	: XA register pair; 8-bit accumulator
BC	: BC register pair
DE	: DE register pair
HL	: HL register pair
XA'	: XA' expanded register pair
BC'	: BC' expanded register pair
DE'	: DE' expanded register pair
HL'	: HL' expanded register pair
PC	: Program counter
SP	: Stack pointer
CY	: Carry flag, bit accumulator
PSW	: Program status word
MBE	: Memory bank enable flag
RBE	: Register bank enable flag
PORT _n	: Port n (n = 0 to 3, 5, 6, 8, 9)
IME	: Interrupt master enable flag
IPS	: Interrupt priority selection register
IE _{xxx}	: Interrupt enable flag
RBS	: Register bank selection register
MBS	: Memory bank selection register
PCC	: Processor clock control register
.	: Separation between address and bit
(xx)	: Contents addressed by xx
xxH	: Hexadecimal data

(3) Explanation of symbols under addressing area column

*1	MB = MBE•MBS (MBS = 0, 1, 15)		Data memory addressing
*2	MB = 0		
*3	MBE = 0 : MB = 0 (000H-07FH) MB = 15 (F80H-FFFH) MBE = 1 : MB = MBS (MBS = 0, 1, 15)		
*4	MB = 15, fmem = FB0H-FBFH, FF0H-FFFH		
*5	MB = 15, pmem = FC0H-FFFH		
*6	μPD753204	addr = 000H-FFFH	Program memory addressing
	μPD753206	addr = 0000H-17FFH	
	μPD753208	addr = 0000H-1FFFH	
*7	addr, addr1 = (Current PC) – 15 to (Current PC) – 1 (Current PC) + 2 to (Current PC) + 16		
*8	μPD753204	caddr = 000H-FFFH	
	μPD753206	caddr = 0000H-0FFFH(PC ₁₂ = 0) or 1000H-17FFH(PC ₁₂ = 1)	
	μPD753208	caddr = 0000H-0FFFH(PC ₁₂ = 0) or 1000H-1FFFH(PC ₁₂ = 1)	
*9	faddr = 0000H-07FFH		
*10	taddr = 0020H-007FH		
*11	μPD753204	addr1 = 000H-FFFH	
	μPD753206	addr1 = 0000H-17FFH	
	μPD753208	addr1 = 0000H-1FFFH	

- Remarks**
1. MB indicates memory bank that can be accessed.
 2. In *2, MB = 0 independently of how MBE and MBS are set.
 3. In *4 and *5, MB = 15 independently of how MBE and MBS are set.
 4. *6 to *11 indicate the areas that can be addressed.

(4) Explanation of number of machine cycles column

S denotes the number of machine cycles required by skip operation when a skip instruction is executed. The value of S varies as follows.

- When no skip is made: S = 0
- When the skipped instruction is a 1- or 2-byte instruction: S = 1
- When the skipped instruction is a 3-byte instruction ^{Note}: S = 2

Note 3-byte instruction: BR !addr, BRA !addr1, CALL !addr or CALLA !addr1 instruction

Caution The GETI instruction is skipped in one machine cycle.

One machine cycle is equal to one cycle of CPU clock (= t_{cy}); time can be selected from among four types by setting PCC.

Instruction group	Mnemonic	Operand	Number of bytes	Number of machine cycles	Operation	Addressing area	Skip condition
Transfer instruction	MOV	A, #n4	1	1	$A \leftarrow n4$		String effect A
		reg1, #n4	2	2	$reg1 \leftarrow n4$

12. ELECTRICAL SPECIFICATIONS

ABSOLUTE MAXIMUM RATINGS (T_A = 25 °C)

Parameter	Symbol	Test Conditions		Rating	Unit
Supply voltage	V _{DD}			-0.3 to +7.0	V
Input voltage	V _{I1}	Except port 5		-0.3 to V _{DD} + 0.3	V
	V _{I2}	Port 5	On-chip pull-up resistor	-0.3 to V _{DD} + 0.3	V
			When N-ch open-drain	-0.3 to +14	V
Output voltage	V _O			-0.3 to V _{DD} + 0.3	V
Output current high	I _{OH}	Per pin		-10	mA
		Total for all pins		-30	mA
Output current low	I _{OL}	Per pin		30	mA
		Total for all pins		220	mA
Operating ambient temperature	T _A			-40 to +85 ^{Note}	° C
Storage temperature	T _{stg}			-65 to +150	° C

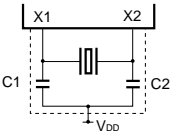

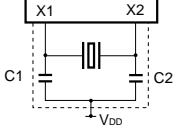

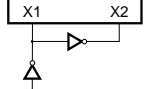

Note When LCD is driven in normal mode: T_A = -10 to +85°C

Caution Product quality may suffer if the absolute maximum rating is exceeded for even a single parameter or even momentarily. That is, the absolute ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions which ensure that the absolute maximum ratings are not exceeded.

CAPACITANCE (T_A = 25°C, V_{DD} = 0 V)

Parameter	Symbol	Test Conditions	MIN.	TYP.	MAX.	Unit
Input capacitance	C _{IN}	f = 1 MHz			15	pF
Output capacitance	C _{OUT}	Unmeasured pins returned to 0 V.			15	pF
I/O capacitance	C _{IO}				15	pF

SYSTEM CLOCK OSCILLATOR CHARACTERISTICS (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

Resonator	Recommended constant	Parameter	Test conditions	MIN.	TYP.	MAX.	Unit
Ceramic resonator		Oscillator frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 2}	MHz
		Oscillation stabilization time ^{Note 3}	After V _{DD} reaches oscillation voltage range MIN.			4	ms
Crystal resonator		Oscillator frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 2}	MHz
		Oscillation stabilization time ^{Note 3}	V _{DD} = 4.5 to 5.5 V			10 30	ms
External clock		X1 input frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 2}	MHz
		X1 input high/low level width (t _{xH} , t _{xL})		83.3		500	ns

★

- Notes**
1. The oscillator frequency and X1 input frequency indicate characteristics of the oscillator only. For the instruction execution time, refer to the AC characteristics.
 2. When the oscillator frequency is 4.19 MHz < f_x - 6.0 MHz, setting the processor clock control register (PCC) to 0011 results in 1 machine cycle being less than the required 0.95 μs. Therefore, set PCC to a value other than 0011.
 3. The oscillation stabilization time is necessary for oscillation to stabilize after applying V_{DD} or releasing the STOP mode.

Caution When using the system clock oscillator, wiring in the area enclosed with the dotted line should be carried out as follows to avoid an adverse effect from wiring capacitance.

- Wiring should be as short as possible.
- Wiring should not cross other signal lines.
- Wiring should not be placed close to a varying high current.
- The potential of the oscillator capacitor ground should be the same as V_{DD}.
- Do not ground it to the ground pattern in which a high current flows.
- Do not fetch a signal from the oscillator.

★ RECOMMENDED OSCILLATOR CONSTANTS

Ceramic resonator (TA = -40 to 85°C)

Manufacturer	Part number	Frequency (MHz)	Oscillator constant (pF)		Oscillation voltage range (V _{DD})		Remark
			C1	C2	MIN. (V)	MAX. (V)	
TDK	CCR1000K2	1.0	100	100	1.8	5.5	—
	CCR2.0MC33	2.0	—	—	2.0		On-chip capacitor
	CCR3.58MC3	3.58					
	CCR4.19MC3	4.19			2.2		
	FCR4.19MC5						
	CCR6.0MC3	6.0			2.5		
	FCR6.0MC5						

Caution The oscillator constant and oscillation voltage range indicate conditions of stable oscillation. Oscillation frequency precision is not guaranteed. For applications requiring oscillation frequency precision, the oscillation frequency must be adjusted on the implementation circuit. For details, please contact directly the manufacturer of the resonator you will use.

DC CHARACTERISTICS (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

				V _{DD} = 3.0 V ± 10%			0.23	0.7	mA
	I _{DD3}	STOP mode	V _{DD} = 5.0 V ± 10%			0.05	10	μA	
			V _{DD} = 3.0 V ±10%				0.02	5	μA
T _A = 25°C					0.02	3	μA		

- Notes**
1. Set VAC0 to 0 when setting the STOP mode. If VAC0 is set to 1, the current increases by about 1 μA.
 2. Either R_{LCD1} or R_{LCD2} can be selected by the mask option.
 3. The voltage deviation is the difference from the output voltage corresponding to the ideal value of the segment and common outputs (V_{LCDn}; n = 0, 1, 2).
 4. Not including currents flowing in on-chip pull-up resistors or LCD split resistors.
 5. When the processor clock control register (PCC) is set to 0011 and the device is operated in the high-speed mode.
 6. When PCC is set to 0000 and the device is operated in the low-speed mode.

AC CHARACTERISTICS (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

			0		275	kHz
TIO input high/low-level width	t _{TIH} , t _{TIL}	V _{DD} = 2.7 to 5.5 V	0.48			μs
			1.8			μs
Interrupt input high/low-level width	t _{INTH} , t _{INTL}	INT0	IM02 = 0		Note 2	μs
			IM02 = 1	10		μs
		INT4		10		μs
		KR0 to KR3		10		μs
RESET low level width	t _{RSL}		10		μs	

- Notes**
- The cycle time (minimum instruction execution time) of the CPU clock (Φ) is determined by the oscillation frequency of the connected resonator (and external clock) and the processor clock control register (PCC). The figure at the right indicates the cycle time t_{cy} versus supply voltage V_{DD} characteristic.
 - 2t_{cy} or 128/f_x is set by setting the interrupt mode register (IM0).

SERIAL TRANSFER OPERATION

2-Wire and 3-Wire Serial I/O Mode ($\overline{\text{SCK}}$...Internal clock output): ($T_A = -40$ to $+85^\circ\text{C}$, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Test conditions	MIN.	TYP.	MAX.	Unit
$\overline{\text{SCK}}$ cycle time	t_{KCY1}	$V_{DD} = 2.7$ to 5.5 V	1300			ns
			3800			ns
$\overline{\text{SCK}}$ high/low-level width	$t_{\text{KL1}}, t_{\text{KH1}}$	$V_{DD} = 2.7$ to 5.5 V	$t_{\text{KCY1}}/2 - 50$			ns
			$t_{\text{KCY1}}/2 - 150$			ns
SI ^{Note 1} setup time (to $\overline{\text{SCK}}\uparrow$)	t_{SIK1}	$V_{DD} = 2.7$ to 5.5 V	150			ns
			500			ns
SI ^{Note 1} hold time (from $\overline{\text{SCK}}\uparrow$)	t_{KSI1}	$V_{DD} = 2.7$ to 5.5 V	400			ns
			600			ns
SO ^{Note 1} output delay time from $\overline{\text{SCK}}\downarrow$	t_{KSO1}	$R_L = 1$ k Ω , $C_L = 100$ pF	Note 2 $V_{DD} = 2.7$ to 5.5 V		250	ns
			0		1000	ns

- Notes**
1. In the 2-wire serial I/O mode, read SB0 or SB1 instead.
 2. R_L and C_L are the load resistance and load capacitance of the SO output lines.

2-Wire and 3-Wire Serial I/O Mode ($\overline{\text{SCK}}$...External clock input): ($T_A = -40$ to $+85^\circ\text{C}$, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Test conditions	MIN.	TYP.	MAX.	Unit
$\overline{\text{SCK}}$ cycle time	t_{KCY2}	$V_{DD} = 2.7$ to 5.5 V	800			ns
			3200			ns
$\overline{\text{SCK}}$ high/low-level width	$t_{\text{KL2}}, t_{\text{KH2}}$	$V_{DD} = 2.7$ to 5.5 V	400			ns
			1600			ns
SI ^{Note 1} setup time (to $\overline{\text{SCK}}\uparrow$)	t_{SIK2}	$V_{DD} = 2.7$ to 5.5 V	100			ns
			150			ns
SI ^{Note 1} hold time (from $\overline{\text{SCK}}\uparrow$)	t_{KSI2}	$V_{DD} = 2.7$ to 5.5 V	400			ns
			600			ns
SO ^{Note 1} output delay time from $\overline{\text{SCK}}\downarrow$	t_{KSO2}	$R_L = 1$ k Ω , $C_L = 100$ pF	Note 2 $V_{DD} = 2.7$ to 5.5 V		300	ns
			0		1000	ns

- Notes**
1. In the 2-wire serial I/O mode, read SB0 or SB1 instead.
 2. R_L and C_L are the load resistance and load capacitance of the SO output lines.

SBI Mode ($\overline{\text{SCK}}$...Internal clock output (master)): ($T_A = -40$ to $+85$ °C, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Test conditions	MIN.	TYP.	MAX.	Unit
$\overline{\text{SCK}}$ cycle time	t_{KCY3}	$V_{DD} = 2.7$ to 5.5 V	1300			ns
			3800			ns
$\overline{\text{SCK}}$ high/low-level width	$t_{\text{KL3}}, t_{\text{KH3}}$	$V_{DD} = 2.7$ to 5.5 V	$t_{\text{KCY3}}/2 - 50$			ns
			$t_{\text{KCY3}}/2 - 150$			ns
SB0, 1 setup time (to $\overline{\text{SCK}}\uparrow$)	t_{SIK3}	$V_{DD} = 2.7$ to 5.5 V	150			ns
			500			ns
SB0, 1 hold time (from $\overline{\text{SCK}}\uparrow$)	t_{KSI3}	$V_{DD} = 2.7$ to 5.5 V	$t_{\text{KCY3}}/2$			ns
SB0, 1 output delay time from $\overline{\text{SCK}}\downarrow$	t_{KSO3}	$R_L = 1$ kΩ, $C_L = 100$ pF	0		250	ns
			0		1000	ns
SB0, 1↓ from $\overline{\text{SCK}}\uparrow$	t_{KSB}		t_{KCY3}			ns
$\overline{\text{SCK}}\downarrow$ from SB0, 1↑	t_{SBK}		t_{KCY3}			ns
SB0, 1 low-level width	t_{SBL}		t_{KCY3}			ns
SB0, 1 high-level width	t_{SBH}		t_{KCY3}			ns

Note R_L and C_L are the load resistance and load capacitance of the SB0 and SB1 output lines.

SBI Mode ($\overline{\text{SCK}}$...External clock input (slave)): ($T_A = -40$ to $+85$ °C, $V_{DD} = 1.8$ to 5.5 V)

Parameter	Symbol	Test conditions	MIN.	TYP.	MAX.	Unit
$\overline{\text{SCK}}$ cycle time	t_{KCY4}	$V_{DD} = 2.7$ to 5.5 V	800			ns
			3200			ns
$\overline{\text{SCK}}$ high/low-level width	$t_{\text{KL4}}, t_{\text{KH4}}$	$V_{DD} = 2.7$ to 5.5 V	400			ns
			1600			ns
SB0, 1 setup time (to $\overline{\text{SCK}}\uparrow$)	t_{SIK4}	$V_{DD} = 2.7$ to 5.5 V	100			ns
			150			ns
SB0, 1 hold time (from $\overline{\text{SCK}}\uparrow$)	t_{KSI4}	$V_{DD} = 2.7$ to 5.5 V	$t_{\text{KCY4}}/2$			ns
SB0, 1 output delay time from $\overline{\text{SCK}}\downarrow$	t_{KSO4}	$R_L = 1$ kΩ, $C_L = 100$ pF	0		300	ns
			0		1000	ns
SB0, 1↓ from $\overline{\text{SCK}}\uparrow$	t_{KSB}		t_{KCY4}			ns
$\overline{\text{SCK}}\downarrow$ from SB0, 1↑	t_{SBK}		t_{KCY4}			ns
SB0, 1 low-level width	t_{SBL}		t_{KCY4}			ns
SB0, 1 high-level width	t_{SBH}		t_{KCY4}			ns

Note R_L and C_L are the load resistance and load capacitance of the SB0 and SB1 output lines.

15. RECOMMENDED SOLDERING CONDITIONS

The μPD753208 should be soldered and mounted under the conditions recommended in the table below.

For details of recommended soldering conditions, refer to the information document “**Semiconductor Device Mounting Technology Manual**” (C10535E).

For soldering methods and conditions other than those recommended below, contact an NEC sales representative.

Table 15-1. Surface Mounting Type Soldering Conditions

- μPD753204GT-xxx : 48-pin plastic shrink SOP (375 mils, 0.65-mm pitch)
- μPD753206GT-xxx : 48-pin plastic shrink SOP (375 mils, 0.65-mm pitch)
- μPD753208GT-xxx : 48-pin plastic shrink SOP (375 mils, 0.65-mm pitch)

Soldering Method	Soldering Conditions	Symbol
Infrared rays reflow	Peak package's surface temperature: 235°C, Reflow time: 30 seconds or less (at 210°C or higher), Number of reflow processes: Twice max.	IR35-00-2
VPS	Peak package's surface temperature: 215°C, Reflow time: 40 seconds or less (at 200°C or higher), Number of reflow processes: Twice max.	VP15-00-2
Wave soldering	Solder temperature: 260°C or below, Flow time: 10 seconds or less, Number of flow process: 1, Preheating temperature: 120°C or below (Package surface temperature)	WS60-00-1
Partial heating	Pin temperature: 300°C or below, Time: 3 seconds or less (per device side)	—

Caution Use of more than one soldering method should be avoided (except for partial heating).

Package	<ul style="list-style-type: none"> • 64-pin plastic QFP (14 × 14 mm) • 64-pin plastic QFP (12 × 12 mm) 	<ul style="list-style-type: none"> • 48-pin plastic shrink SOP (375 mils, 0.65-mm pitch) 	

APPENDIX B DEVELOPMENT TOOLS

The following development tools are provided for system development using the μPD753208.

In 75XL series, the relocatable assembler which is common to the μPD753208 Subseries is used in combination with the device file of each product.

Language processor

RA75X relocatable assembler	Host machine			Part number (product name)
		OS	Distribution media	
PC-9800 series		MS-DOS™ (Ver. 3.30 to Ver. 6.2 ^{Note})	3.5-inch 2HD	μS5A13RA75X
			5-inch 2HD	μS5A10RA75X
IBM PC/AT™ and compatible machines		Refer to section "OS for IBM PC"	3.5-inch 2HC	μS7B13RA75X
			5-inch 2HC	μS7B10RA75X

Device file	Host machine			Part number (product name)
		OS	Distribution media	
PC-9800 series		MS-DOS (Ver. 3.30 to Ver. 6.2 ^{Note})	3.5-inch 2HD	μS5A13DF753208
			5-inch 2HD	μS5A10DF753208
IBM PC/AT and compatible machines		Refer to section "OS for IBM PC"	3.5-inch 2HC	μS7B13DF753208
			5-inch 2HC	μS7B10DF753208

PROM write tools

Hardware	PG-1500	PG-1500 is a PROM programmer which enables you to program single chip microcomputers including PROM by stand-alone or host machine operation by connecting an attached board and optional programmer adapter to PG-1500. It also enables you to program typical PROM devices of 256 Kbits to 4 Mbits.				
	PA-75P3216GT	PROM programmer adapter for the μPD75P3216GT. Connect the programmer adapter to PG-1500 for use.				
Software	PG-1500 controller	PG-1500 and a host machine are connected by serial and parallel interfaces and PG-1500 is controlled on the host machine.				
		Host machine			Part number (product name)	
			OS	Distribution media		
		PC-9800 series		MS-DOS (Ver. 3.30 to Ver. 6.2 ^{Note})	3.5-inch 2HD	μS5A13PG1500
					5-inch 2HD	μS5A10PG1500
IBM PC/AT and compatible machines		Refer to section "OS for IBM PC"	3.5-inch 2HD	μS7B13PG1500		
			5-inch 2HC	μS7B10PG1500		

Note Ver. 5.00 or later have the task swap function, but it cannot be used for this software.

- Remarks**
1. Operation of the assembler and device file is guaranteed only on the above host machine and OSs.
 2. Operation of the PG-1500 controller is guaranteed only on the above host machine and OSs.

Debugging tool

The in-circuit emulators (IE-75000-R and IE-75001-R) are available as the program debugging tool for the μPD753208.

The system configurations are described as follows.

Hardware	IE-75000-R ^{Note 1}	In-circuit emulator for debugging the hardware and software when developing the application systems that use the 75X series and 75XL series. When developing a μPD753208 subseries, the emulation board IE-75300-R-EM and emulation probe EP-753208GT-R that are sold separately must be used with the IE-75000-R. By connecting with the host machine and the PROM programmer, efficient debugging can be made. It contains the emulation board IE-75000-R-EM which is connected.			
	IE-75001-R	In-circuit emulator for debugging the hardware and software when developing the application systems that use the 75X series and 75XL series. When developing a μPD753208 subseries, the emulation board IE-75300-R-EM and emulation probe EP-753208GT-R which are sold separately must be used with the IE-75001-R. It can debug the system efficiently by connecting the host machine and PROM programmer.			
	IE-75300-R-EM	Emulation board for evaluating the application systems that use a μPD753208 subseries. It must be used with the IE-75000-R or IE-75001-R.			
	EP-753208GT-R	Emulation probe for the μPD753208GT. It must be connected to the IE-75000-R (or IE-75001-R) and IE-75300-R-EM. It is supplied with the 48-pin conversion adapter EV-9500GF-48 which facilitates connection to a target system.			
	EV-9500GF-48				
Software	IE control program	Connects the IE-75000-R or IE-75001-R to a host machine via RS-232-C and Centronix I/F and controls the above hardware on a host machine.			
		Host machine	OS	Distribution media	Part No. (product name)
		PC-9800 series	MS-DOS (Ver. 3.30 to Ver. 6.2 ^{Note 2})	3.5-inch 2HD	μS5A13IE75X
				5-inch 2HD	μS5A10IE75X
		IBM PC/AT and its compatible machine	Refer to section "OS for IBM PC"	3.5-inch 2HC	μS7B13IE75X
5-inch 2HC	μS7B10IE75X				

Notes 1. Maintenance parts.

2. Ver. 5.00 or later have the task swap function, but it cannot be used for this software.

Remarks 1. Operation of the IE control program is guaranteed only on the above host machines and OSs.

2. The μPD753204, 753206, 753208, and 75P3216 are commonly referred to as the μPD753208 Subseries.

OS for IBM PC

The following IBM PC OS's are supported.

OS	Version
PC DOS™	Ver. 5.02 to Ver. 6.3 J6.1/V <small>Note</small> to J6.3/V <small>Note</small>
MS-DOS	Ver. 5.0 to Ver. 6.22 5.0/V <small>Note</small> to 6.2/V <small>Note</small>
IBM DOS™	J5.02/V <small>Note</small>

Note English version is supported.

Caution Ver. 5.0 and later have the task swap function, but it cannot be used for this software.

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note: Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note: No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS device behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note: Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

The export of this product from Japan is regulated by the Japanese government. To export this product may be prohibited without governmental license, the need for which must be judged by the customer. The export or re-export of this product from a country other than Japan may also be prohibited without a license from that country. Please call an NEC sales representative.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
